Appendix 2 Meeting with a Remarkable Man

Introduction

When I was 3 years old, we lived in Giza, Egypt, a mile and a half (2 km) away from the Great Pyramid. I played in the garden of our villa and always saw the Great Pyramid in the background on top of the hill large as life and wondered what it was?

They took me there and I found that my height was identical to the first course of pyramid stones and I touched it for the first time.

I used to go outside early morning every day to see the sunrise lighting the eastern face of the Great Pyramid. I sat on the ground looking at it and piling sand in front of me in the shape of the pyramid.

At the age of seven, I went to live with my grandparents in Heliopolis after my mother's death. My grandfather was the first Egyptian to get his Doctorate of Chemistry in 1920 from Germany and my German grandmother was a very fine educated lady.

He had a very large library full of books in all fields of science and old colored encyclopedias.

As a child, I was fascinated with these colored books and would sit for hours looking at the richness of science in life. He also had different chemistry glassware shapes, delicate measuring scales and some large ones and…a microscope.

Using his microscope to see the miniature life when I was a child turned my attention to the limited ability of the eyes to see the world reality around me, I was fascinated…Oh, what secrecy and what a deep profound impact this had on me.

In addition, his academic and scientific environment was filled with morals, ethics, intellectual advancement and precision of workmanship.

At the age of 14, my cousin and I went to the Giza Pyramids. What a day – I was on top of the world, yes, literally. After I asked many guides around the Great Pyramid, we climbed the best route with perfect stones, the southeastern corner.

I was so energized and full of courage to climb 203 courses of stones, 453 feet (138 meters) above the ground. On this 33 feet (10 meters) square summit platform of the Great Pyramid the view and the air were fantastic. I felt sprightly, weightless and renewed.

A year later I flew with a school trip to Lebanon and visited the Baalbek complex and its quarry, which has the single largest piece of stonework ever crafted in the world, weighing 1200 tons. How did they do that?

I was astonished and shocked with its weight since the Great Pyramid at Giza has over 2 million limestone blocks averaging in weight of 2 tons for its massive body, in addition to thousands of hard limestone blocks weighing up to 20 tons each for the casing blocks and finally the 150+ granite blocks weighing up to 70 tons each for its Energy Pump. All these blocks weighing over 6 million tons are placed on a 13-acre area (53000 square meters), with original base side length of 760 feet (231.7 meters) and original vertical height with apex of 484 feet (147.5 meters).

A year passed and I went again to the top of the Great Pyramid to show my brother Raouf, the splendor, indescribable and the fantastic feeling I got at the summit platform. This time I really longed so much to know the secret of this pyramid.

I went to see the Sun Pyramid in Mexico to compare it with my beloved Great Pyramid and I found it different.

After I graduated with a bachelor degree in science from Cairo University in

1980, I returned again to my Great Pyramid. Choosing to find its scientific solution by giving it the attention it deserves.

I searched in all the available resources that I could find anywhere looking for the logical answer until finally I found a book that changed my life. I will mention more about it later.

When I immigrated to the United States of America in 1986 I lived across the street from Harvard University and MIT. Science was everywhere and helped the advancement of the pyramid research.

I saw the Great Pyramid's precision and criteria like a precise scientific instrument, a machine or an independently functioning system to achieve a particular goal. But what was this goal???

Questions with no answers ran through my mind and to answer them I have to build one, a miniature Great Pyramid.

We are very lucky that the majority of the machine parts are still there, but what about the missing parts of the Great Pyramid, whether disassembled by the manufacture to hinder its reality from then until now, or robbed through its history?

We'll never know the identical missing parts that were there and we can only guess at them to make the machine function again as it was intended to be.

The Great Pyramid's major disassembly and functional devastation happened in the year 1320 AD after an earthquake in Cairo, Egypt, when all the thousands of smooth covering blocks were removed and the pyramid dismantled to build other structures. With this, the true functional Great Pyramid was changed forever.

Over 30 years of my research has enabled an accumulation of tons of detailed materials and pictures through hundreds of experiments, many trips between

the United States and Egypt, hundreds of trips inside and around the Great Pyramid in addition to thousands of dollars to support the research.

Building one solid model after another of the miniature (1:365.2422 scale) of the Great Pyramid. From cutting and drilling small Aswan red granite Energy Pumps using diamond bits and saws to ordering Laser first surface mirrors for the system energy containment elements and its fuel cells to combine the hydrogen and oxygen gases produced to get electricity and ultra-pure fresh water.

Finally on the 24th of May 1997 - 15 years ago, The Great Pyramid System Model 7 worked day after day in breaking the water to its gases, hydrogen and oxygen using free renewable Life Energy.

I cried and cried from happiness when the Great Pyramid Machine worked again to produce Life Energy continuously day and night.

After three months the blue print of the Great Pyramid System and its discovered technology to generate Life Energy was deposited in 122 Patent offices worldwide, for safe keeping for future generations worldwide (see Appendix). Since then and after 15 years, more discoveries had been found and mentioned in this book.

The Great Pyramid design and technology as a functional complete system, with a final calculated purpose, is obscure, strange and unimaginable.

The truth about the Great Pyramid is now uncovered and power can be generated using miniature to bigger machines. This is the solution to save our beautiful planet from pollution and world struggle for energy.

This is the discovery journey of “The Great Pyramid System”, it is a Machine.

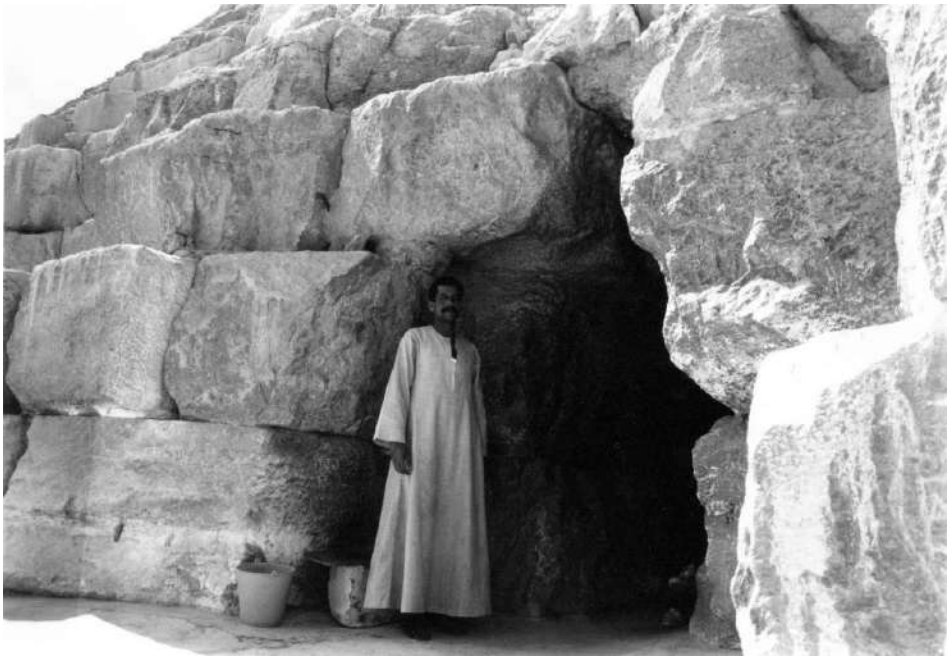
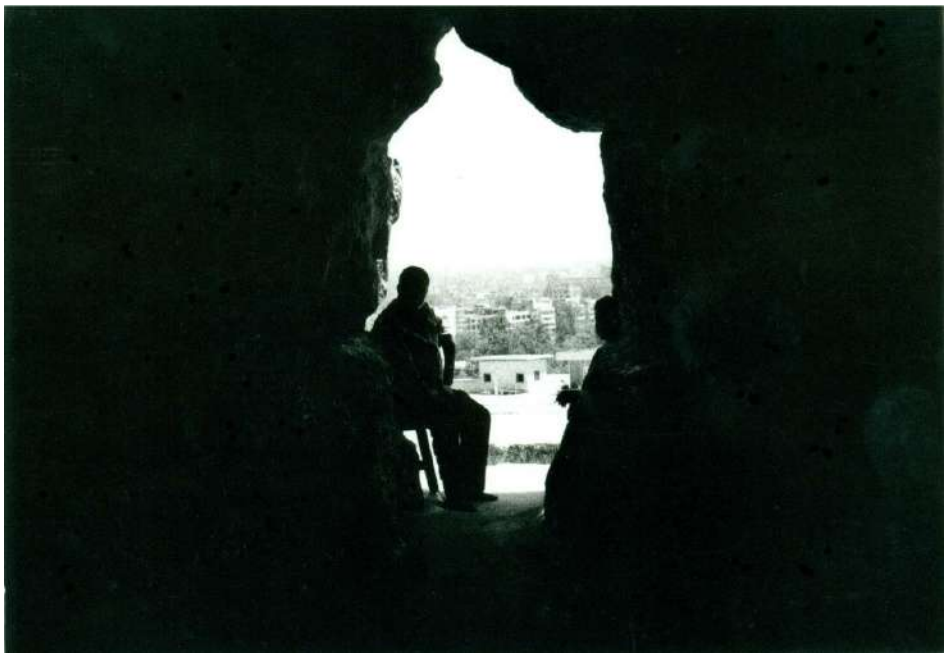
Chapter 1

Opening the Great Pyramid in the Year 832 AD



1. Caliph Al Mamun Entrance – Looking in



2. Caliph Al Mamun Entrance – Looking out

“Aladdin and the Magic Lamp”, “Ali Baba and the Forty Thieves” and “The Seven Voyages of Sinbad the Sailor” three stories from “The Arabian Nights” or “The One Thousand and One Arabian Nights” an Arabic book that is now translated to many languages of the world.

These stories and more delighted us through the years as they delighted the man for whom they were written.

He was Harun Al Rashid the fifth Arab Abbasid Caliph who ruled the Islamic world from its capital, then in Iraq, from 786-809 AD. It was a time of scientific, religious, art and music prosperity.

One day his son Al Mamun, a young man then, heard in his father’s court which was full of people from all walks of life and from near and far, that there existed a very large pyramid in the land of Egypt called the Great Pyramid. They added that this pyramid was still closed and that no one dared to open it, unlike the other 90+ pyramids there, already opened and robbed. They continued saying that this large smooth white marble pyramid takes your breath away, and you can see the sun’s reflection back from its surfaces

while standing on the Nile river banks over 5 miles (8 km) away.

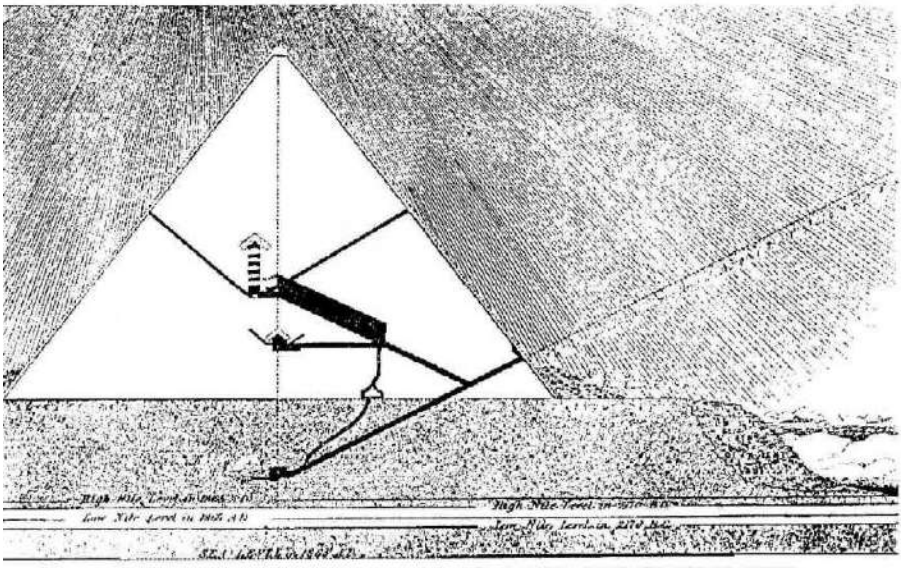
They said that the Great Pyramid contained knowledge and maps of the stars, all the treasures you can dream of, from gold and silver to diamonds and precious stones of all rainbow colors.

Al Mamun heard all that and it sank deep inside his conscious and subconscious minds, and the pyramid seed was planted in his consciousness.

After Al Rashid death in 809 AD, his older son Al Amin became the new Caliph for only 4 years, and then his younger brother Al Mamun (Abu Jafar Abdullah Al Mamoun) became the seventh Caliph of the Islamic world in 813 AD.

Al Mamun was the greatest patron of philosophy and science in the history of Islam. He established the House of Wisdom or “Bait Al Hekma”, combining a large library and an academy.

Sponsoring the translations of Greek and Indian scientific and philosophical works to the Arabic language, and he also had built two astronomical star observatories in the year 830 AD.



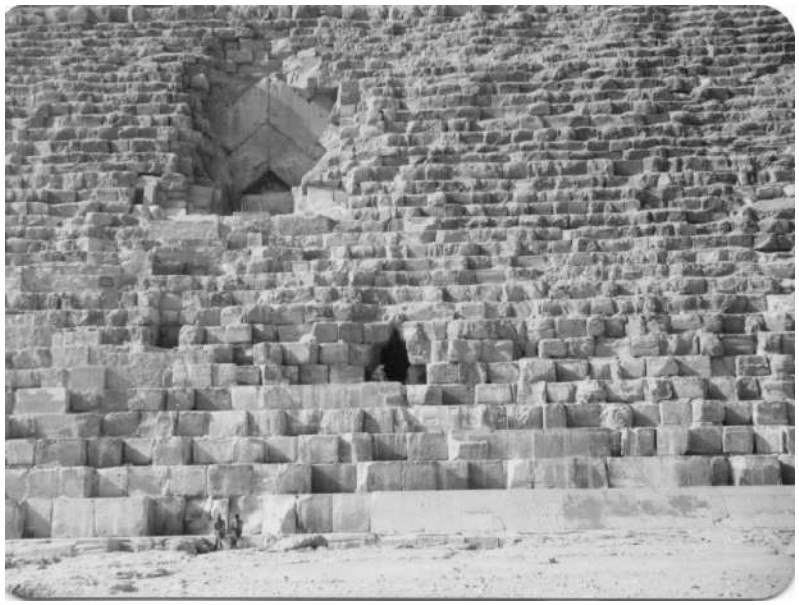
3. The Great Pyramid
vertical section, north-south, looking west
showing Solid Pyramid (white), Earth (gray) and spaces (black)

In the year 832 AD, Caliph Al Mamun decided to go to Egypt to open the Great Pyramid. He assembled a few hundred brave souls from scientists, architects, astronomers and mathematicians to accompany his treasure dream trip that had been planted in his consciousness 30 years before. Caliph Al Mamun died one year after opening the Great Pyramid!

Al Mamun's expedition arrived in Cairo, Egypt and started to pursue the pyramid at once. Visiting all the open pyramids along the Nile and logging down their entrance and corridors locations.

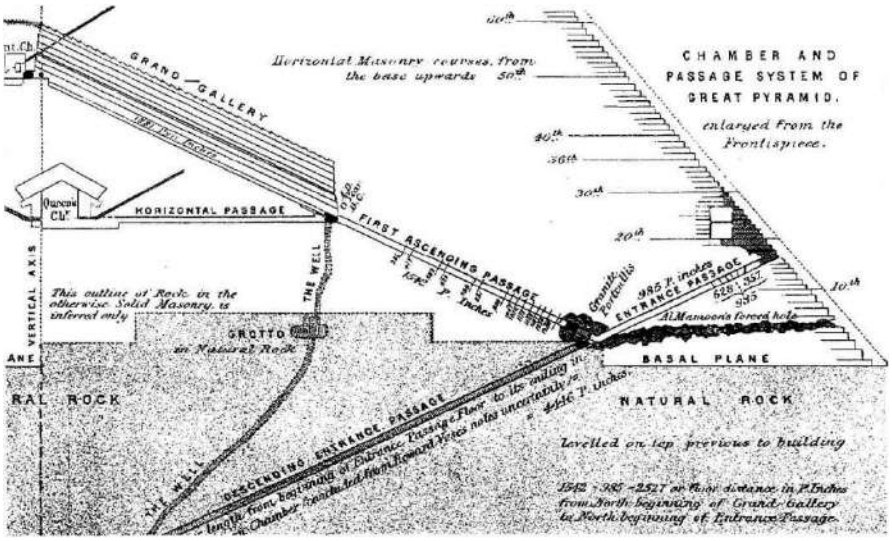
What a surprise, they discovered that all the pyramids of Egypt had their entrance and corridors locations the same!

The entrance is always in the centerline of the northern face, and a few feet above the ground. This entrance leads to a descending passage and all the internal chambers.

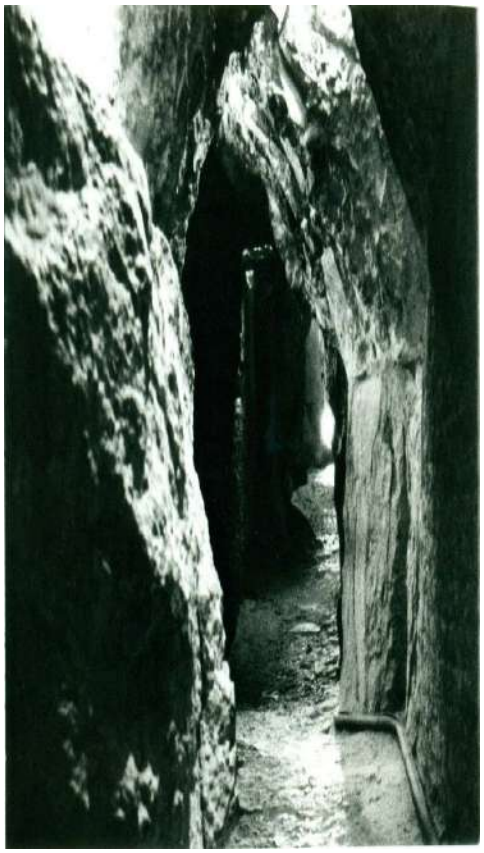


4. The northern face of the Great Pyramid, showing Al Mamun's entrance on the bottom, 20 feet (6 meters) above the ground level on the fifth course of stones up to its eighth course, and on the centerline between west and east. Also showing the original pyramid entrance on the top, 49 feet (14.9 meters) above the ground level on the fifteenth course of stones, and 24 feet (7.3 meters) east of the centerline between west and east. Notice two people sitting on the pavement under the original entrance

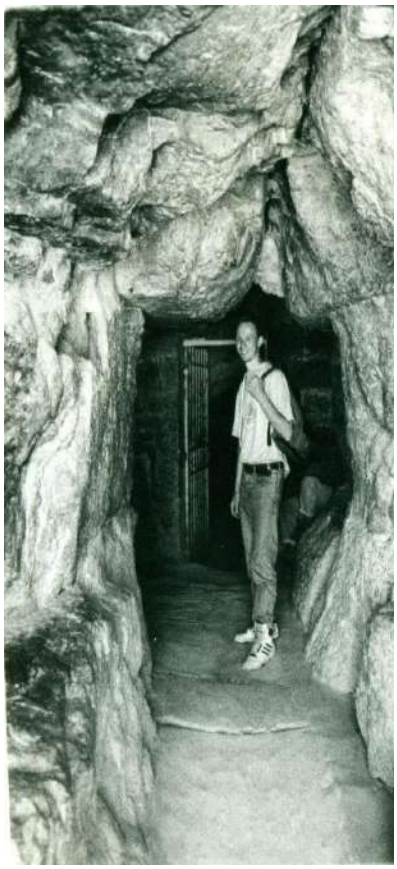
Al Mamun's expedition calculated the centerline of the Great Pyramid and at a height of 20 feet (6 meters), they tunneled horizontally south for 100 feet (30 meters) when they heard and felt a rumbling sound and vibrations on the eastern side of their tunnel, they changed the direction of tunneling 90 degrees and tunneled east, for another 24 feet (7.3 meters). They where inside. The Great Pyramid was opened in the year 832 AD.



5. The Great Pyramid, cross section, north-south looking west (Al Mamun Tunnel in black)



6. Al Mamun Tunnel



7. Eng. Kareem Abdallah

Their tunnel intersected with the **Descending Passage** (**Lower Pipe** in the book), they went down in it, until they reached a room deep under the ground, they called it the **Subterranean Chamber** (**Water Mirror** in the book), and they found nothing except an unfinished chamber with worn uneven floor and a large deep pit in the middle of it leading nowhere!

They went back, up the Lower Pipe and opened its original entrance on the north face of the pyramid.

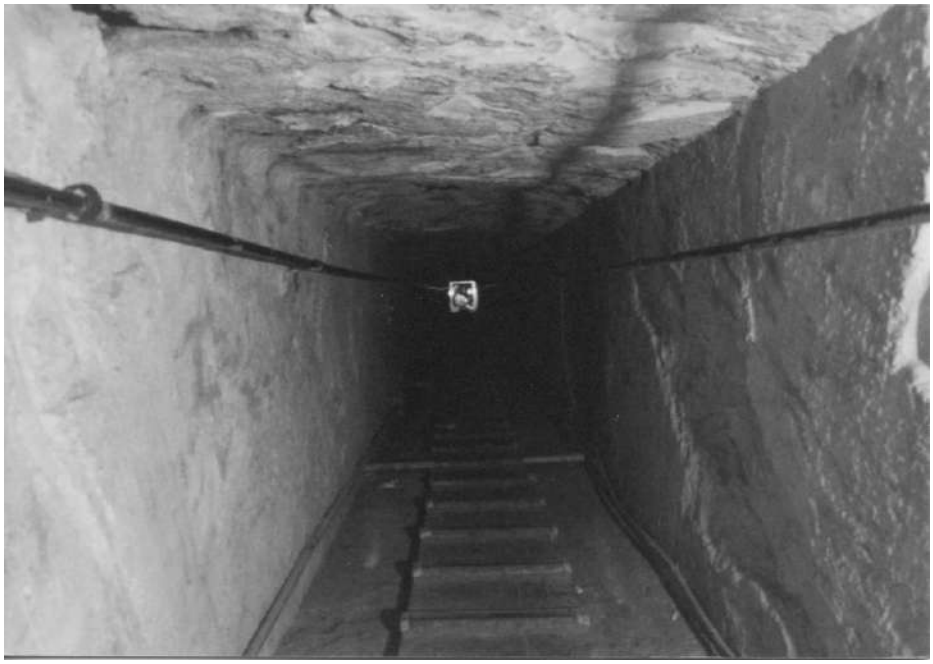
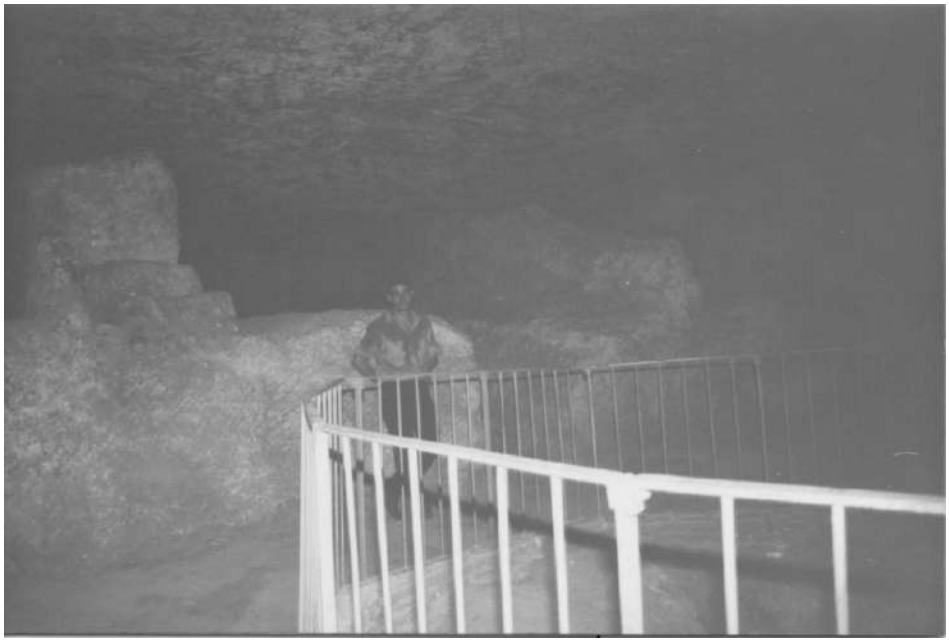
8. The original north face entrance of the Great Pyramid

9. Intersection of Al Mamun Tunnel and the Lower Pipe



10. Looking down the Lower Pipe length, totaling 340 feet (104 meters) to the Water Mirror under the pyramid base and in the center between its four sides

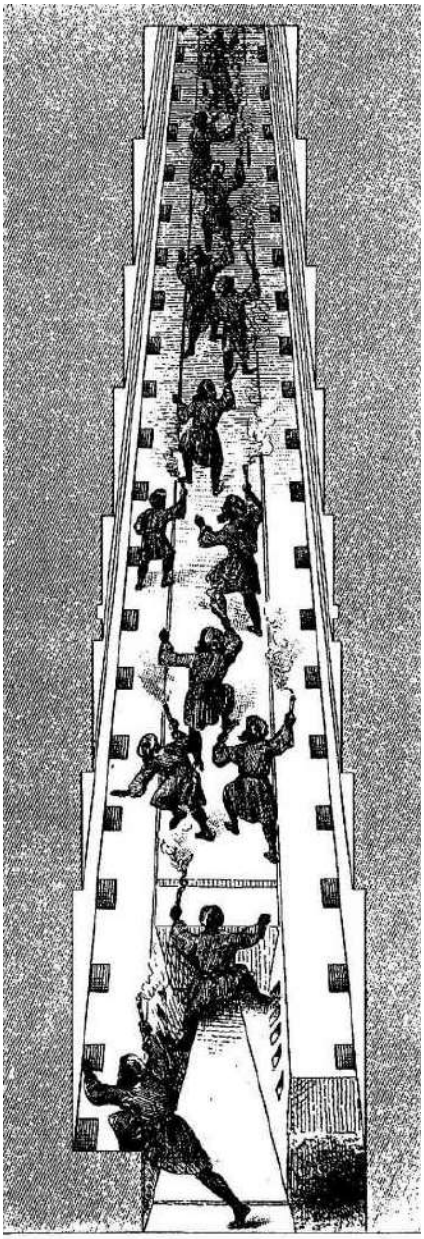


11. Standing in the Water Mirror, 108 feet (33 meters) under the Great Pyramid base and 562 feet (171 meters) directly under the summit platform of the Great Pyramid

12. The granite plugs bottom side from the Lower Pipe

What was this rumbling sound they heard earlier, that sound of something falling inside the Lower Pipe? They looked and found a specially designed limestone block or the “prismatic stone” that fell from the roof of the Lower Pipe and was hiding a granite block behind it. This granite block must lead to the treasure they said. Granite was a very hard material to work with and to get out of their way, they preferred to tunnel around it where they discovered a second then a third block and finally only half a granite block reaching what they called the **Ascending Passage** (**Upper Pipe** in the book). They went up in this passage reaching a high and long hall - they called it the **Grand Gallery** (**Gases Separation Tower - GST** in the book).

13. Looking east at the granite plugs and the Upper Pipe

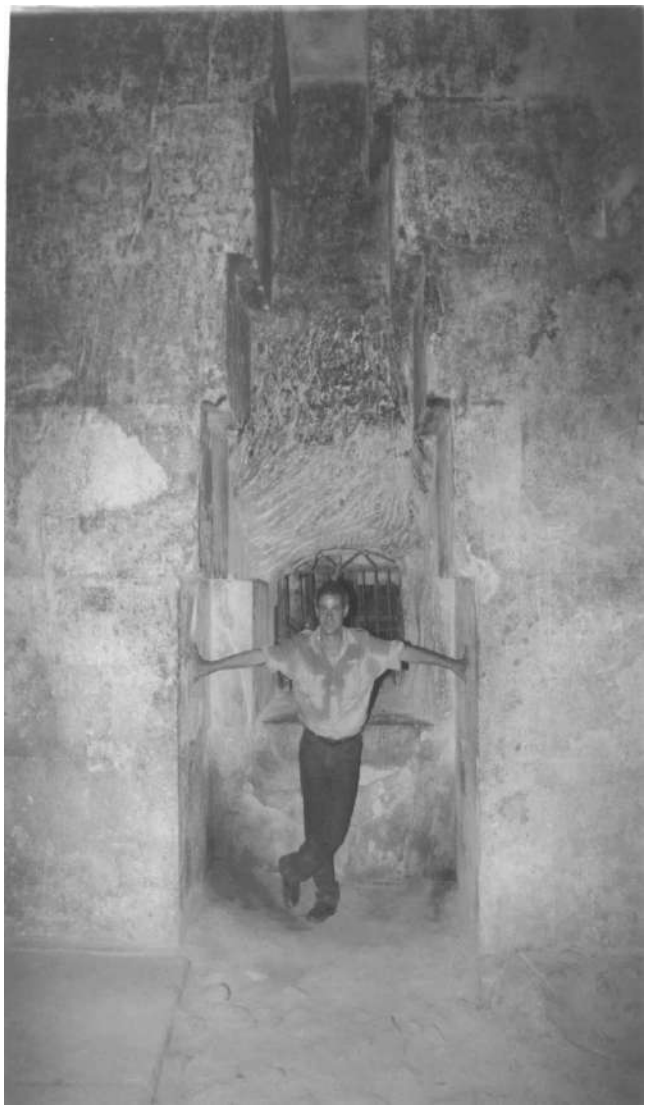


VERTICAL TRANSVERSE SECTION. LOOKING SOUTHWARD.
FROM THE LOWER, OR NORTH END.
OR BEGINNING OF GRAND GALLERY. GR. PYR^D

14. The Gases Separation Tower – GST vertical Transverse section

15. The Gases Separation Tower – GST and the horizontal pipe to the Hydrogen Generator - HG

Standing tall at last in the beginning of the Gases Separation Tower – GST, they found a low horizontal passage in front of them, with their flames lit they went through it. The walls started to sparkle, the more they went forward the more glitter and reflections from their flames glowed back until they reached an empty room with a beveled ceiling, and they called it the **Queen's Chamber** (**Hydrogen Generator – HG** in the book).



16. Standing in the “Niche” of the Hydrogen Generator – HG

Standing in the midst of a sparkling wonder, sparkles on the ceiling, walls and floor; everything covered in diamonds even a niche in the eastern wall. They found the treasure at last and started cheering each other, until one of them broke apiece off and tasted it. Salt. It was all salt, sparkling salt, not diamonds.

They returned back to the Gases Separation Tower - GST and started climbing its angled stone floor, higher and higher they went until reaching the top horizontal **Great Step** (**Center Platform** in the book).

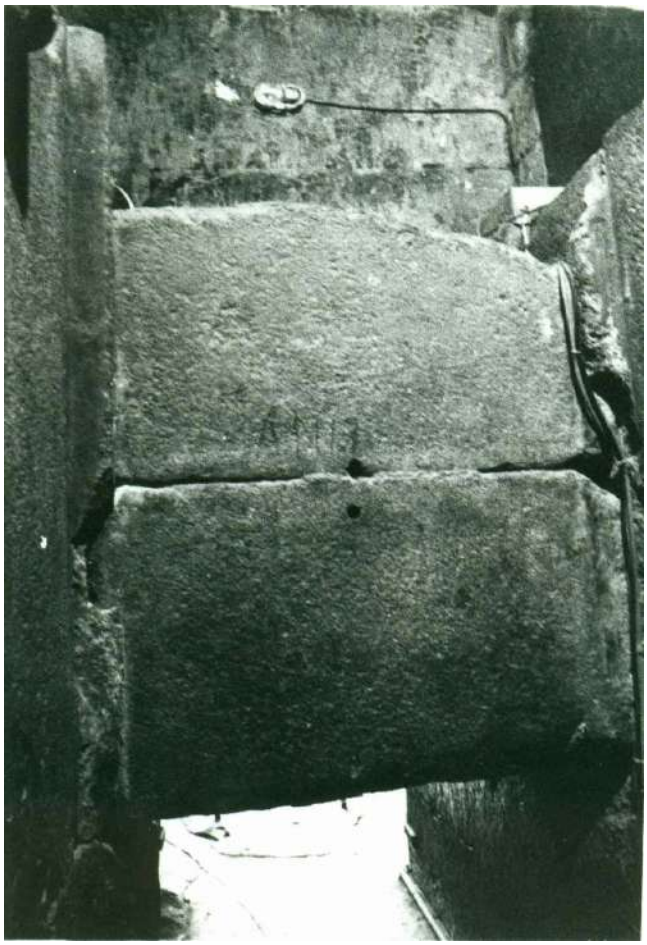
Al Mamun stood on the Center Platform looking down at the Gases Separation Tower – GST and wondering, what is this?

A strange design he had never seen before in any building ever. What caused this Center Platform under his feet to wear and break in half? Why did portions of the limestone on his sides look like molten wax, what extreme temperature caused this limestone to melt?

He did not realize that this Center Platform is almost the center point between all the sides of the Great Pyramid and in the center of its two mirrors, the bottom Water Mirror and the top Capstone Mirror.

He turned around and continued walking where he found that all the limestone around him became granite, the ceiling, walls, floor and gate slabs; all of red granite, They called this granite space the **Antechamber** (**Gases Separation Tower – GST Exit Valves** in the book).

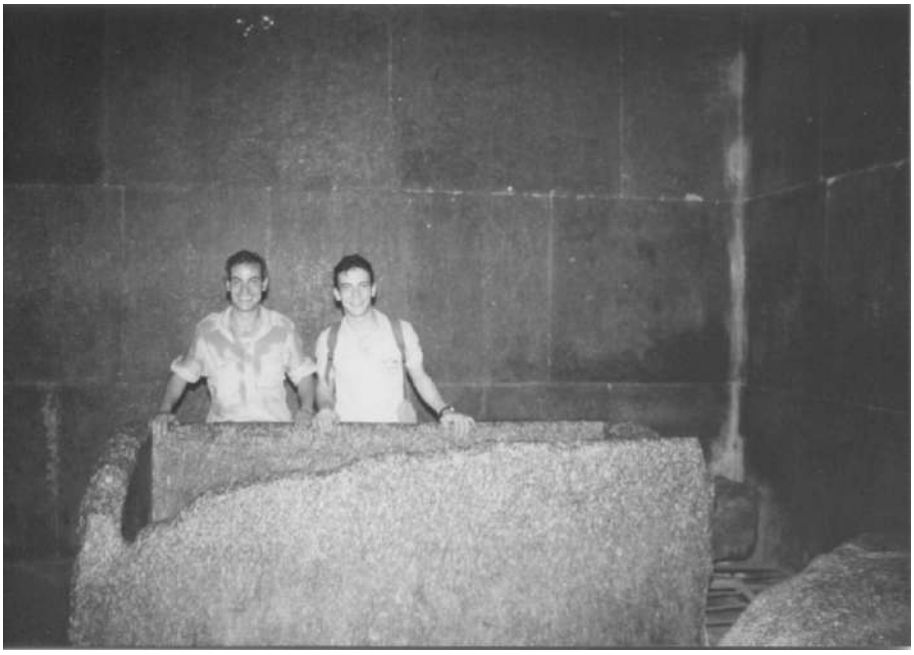
17. The Famous “Boss” on the granite Leaf slab



18. The back of the granite Leaf slabs

Then they went through the smallest passage in the whole pyramid reaching a large room built all with red granite. They called this granite room the **King's Chamber** (**Energy Pump** in the book). The only thing they found was an empty lidless granite rectangular box. What a disappointment after all this effort for nothing. There was not even a mummy to call it a tomb and there is not one letter of hieroglyphic in the whole pyramid to give them a clue as to what it was.

If Al Mamun and his expedition had just known that they were walking inside the treasure without knowing it. Every space they entered and every passage they went through are the treasure; they are inside the components of a giant machine system to generate energy!



19. With Hesham my brother in the granite Energy Pump of the Great Pyramid

The collective knowledge that Al Mamun expedition had in 832 AD was not enough to solve the machine puzzle. Not for another 1128 years could it be solved, not until the energy containment mirrors for laser were discovered in 1960 AD.

CHAPTER 2

HOLLOW PYRAMIDS EXPERIMENTS

One year after I graduated from Cairo University with a bachelor degree in science in 1980, a book “The Secret Power of Pyramids” written by Bill Schul and Ed Pettit fell in my hands on the 20th of May 1981 and changed my life. Raouf, my brother, and I read the book with fascination then we discussed different ideas and comments especially since the Great Pyramid is 8 miles away from us. That was over 30 years ago, we were amazed with this pyramid power.

We decided to start experimentation with hollow pyramids so we could get to know this pyramid energy and power.
The energy is not electromagnetic in nature so it cannot be tested directly but it still can cause detectable results that we can test, log and verify.

22. Wooden meditation and healing pyramid

In 1983 in Egypt, we built this meditation and healing pyramid made of wood with its 10 feet (3 meters) base side length and a waterbed floor, it took one room out of our three-room apartment.

One day my father passed on us and saw the pyramid room and he went crazy…
“This is half your living room,” he said loudly looking at us with unblinking eyes. “What are you building this pyramid for?” he asked. “You two can come and build some tanks with me.”

My father owned a general contracting company and built hundreds of these huge storage petroleum tanks all over Egypt since 1963. He became known as the “Tanks King” in addition to building turnkey factories and power plants. He received many medals and awards for his precise work done on time.
We had to help him every summer vacation by reading project blue prints and supervising project sites since we were young.

“It is the pyramid power”, we said. “Just lay on the waterbed inside it for a few minutes and feel.” He did and then came out smiling shaking his head and said, “I almost went to sleep on this waterbed it is very relaxing”.
All our friends used to pass on us for some quality charging time in this pyramid and they’d leave smiling. It stayed there for 2 years.

Sleeping in this pyramid was great. Only 4-5 hours of sleep was enough for that day - call it a quick charge. You would have vivid dreams that you’d remember when you woke up.
The only problem was overcharge, you cannot sleep in it every day or you get too much energy, your body feels irritated and the benefits will be reversed.

When this wooden pyramid was disassembled, the water bed had a big Clear bubble on top of the water, about 5 feet (1.52 meters) in diameter. We didn’t realize that this bubble is hydrogen & oxygen gases from the water being dissociated by the energy in 2 years time!

For the next 5 years and after hundreds of experiments using hollow pyramids made of cardboard, wood, glass, plastic and other materials, varying in sizes from small 6 inches (15 cm) base side to over 10 feet (3 meters) whole room pyramid, all are aligned to the magnetic north, and we reached a lot of results.

The 5 years Hollow Pyramids experimentation findings:

- Razor blades stay sharp and shave good for over a year
- Dehydration of fruits and vegetables
- Food preservation
- Milk turns into yogurt
- Plants have healthy growth

- Healthy marine life in pyramid aquariums
- Vivid dreams and good meditation
- Healing effects
- The energy is controlled by the mind…WHAT

Wait a minute what did you say? Controlled by the mind…

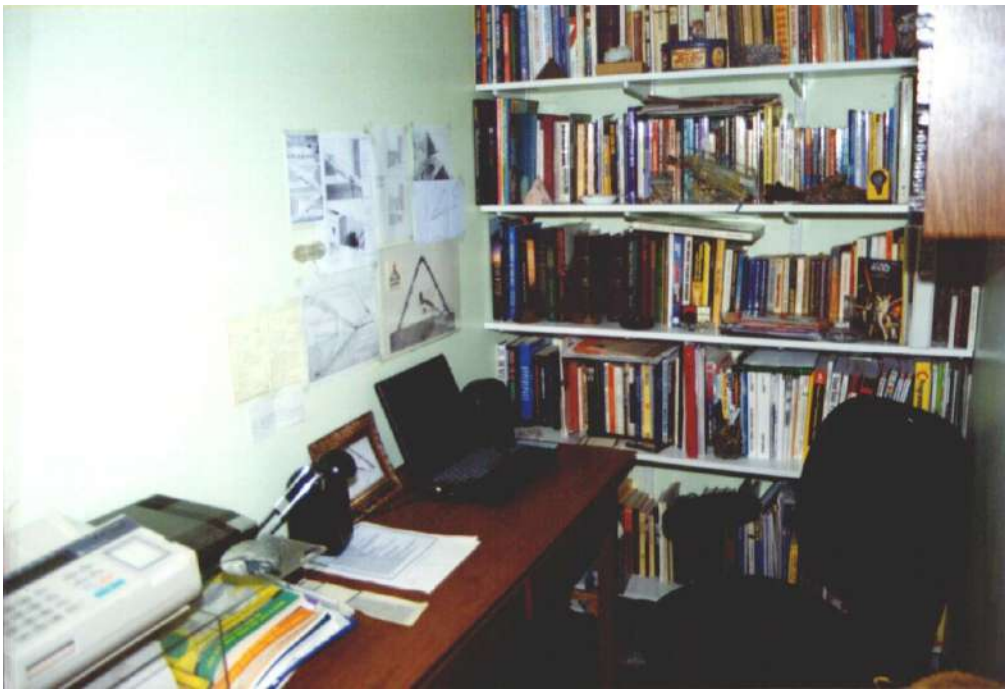
Interacts with our physical world through an unseen world, causes effects from a distance using the mind as a part of the circuitry, the thoughts of the experimenter affect the outcome of the experiment, is this quantum physics on a macro scale?

At this point my brother Raouf said this science is new, powerful and the mind has a lot to do with its use and misuse.

Raouf started turning some of the experimentation pyramids on their sides, if not completely disassembled, to turn them off. “They are too many and too powerful on our safety for now”, he said.

I went crazy because it is “Science” we are dealing with here, very old science, and its code deciphering pieces are scattered worldwide waiting like precious pearls to be gathered and threaded together again.

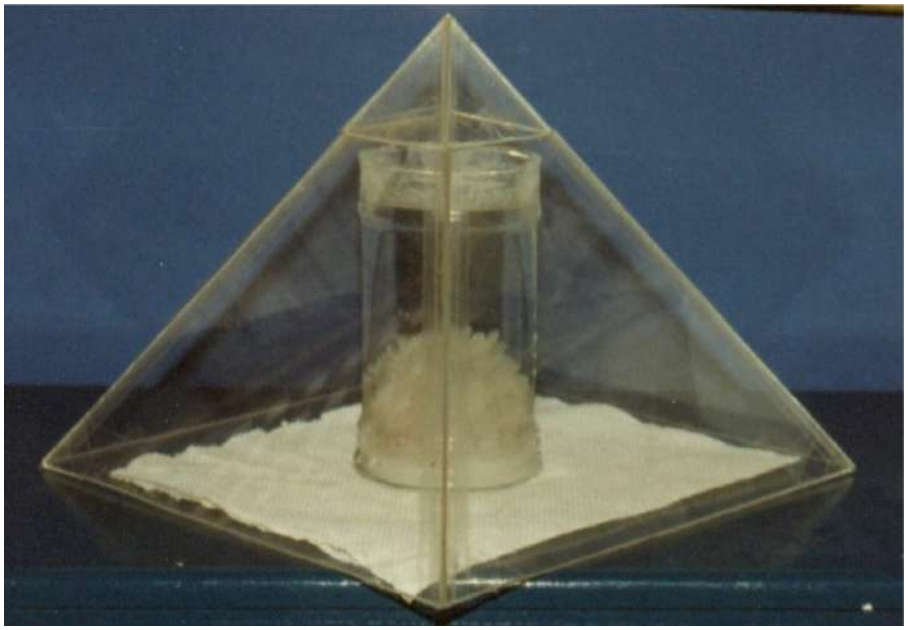
After immigrating to the States in 1986, I was always longing to be with Raouf my dear brother and the Great Pyramid, both I left behind in Egypt, I felt like pieces of my heart are torn away even though I went there at least twice a year.



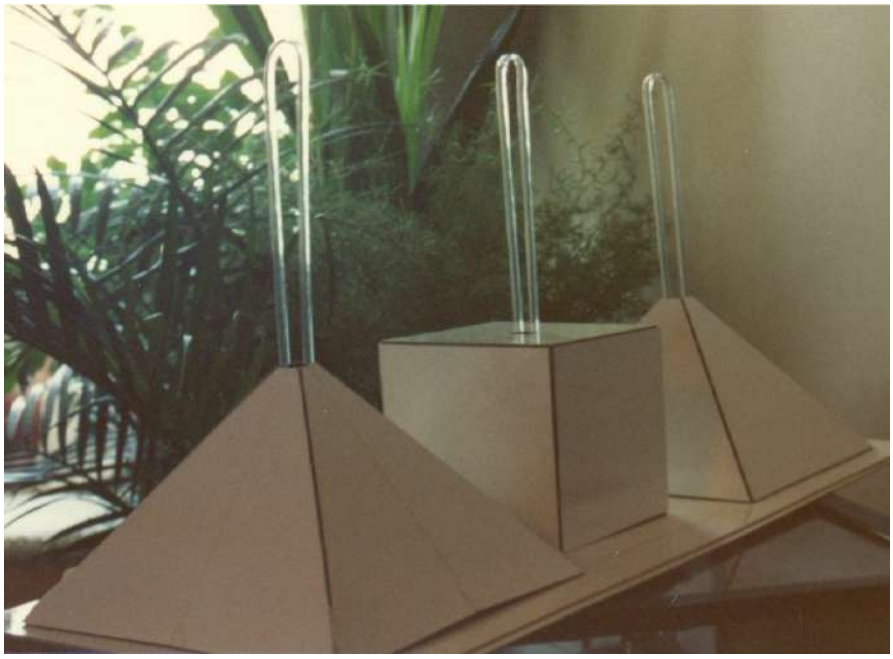
23. My home business office of “AquaPyramids” in Somerville, Massachusetts that I opened in 1989 to import Red Sea fish and invertebrates for breeding and distribution to public aquariums and pet stores all over the United States until 1997. Must have Great Pyramid diagrams on the walls and a granite Energy Pump & GST on the shelves!

The Great Pyramid research was always in my mind and dreams, so I built my pyramid research lab and started the research again alone, finalizing the hollow pyramid stage experimentation, in addition to summarizing the energy characteristics that we will talk about it in detail the next chapter. All this information was needed to get ready for the solid Great Pyramid System. At last, after ten years since I started.

In the next few pages are some of the hollow pyramid experiments that were done in Egypt and USA.



24. Crystallization experiment inside the pyramid



25. Water Dehydration experiment using 2 pyramids and 1 control box, notice the indented sides of the pyramid on bottom of picture

Marine Pyramid Aquariums

26. A marine pyramid aquarium in Egypt - 1983 3-¼ feet base side length (1 meter)

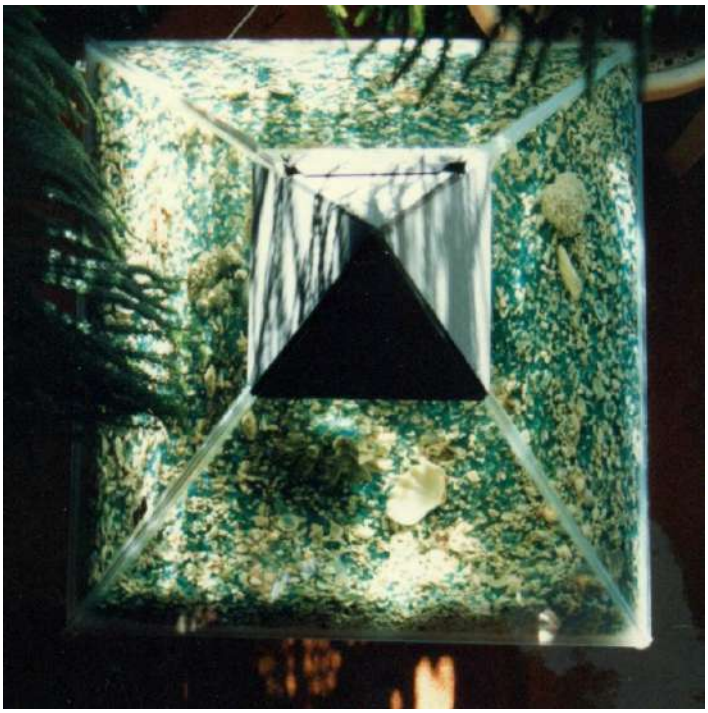
In 1983 Raouf my brother and I started our first business “Red Sea Aquarium Company” to collect, breed and propagate Red Sea fish and invertebrates to supply the Egyptian market and to export worldwide.

These creatures are so beautiful, the fish are very colorful, very cute, and they take your breath away. As for the invertebrates, especially these colorful corals, they have strange shapes and behaviors like they are out of this world, from outer space. Corals are the only animals with plant skin that can eat light.

We were so happy to leave the crowded Cairo city and go scuba diving with our compressed air tanks in the beautiful Red Sea. We always enjoyed diving for over 10 years.
It started after watching a James Bond movie “Thunderball” with underwater scenes out of this world. We loved the underwater scenes so much, that we purchased our diving gear to see the beauty and feel the weightlessness, but there were no diving clubs to teach us how to dive in Cairo, Egypt in 1972.
So we had to study safe diving from many diving books and the courses we

could find to conclude our safe diving practices.

27. A marine hospital pyramid aquarium in USA – 1993 2 feet (0.63 meter) base side length, this hospital tank was used to treat many fish diseases without using any medications, especially lateral line disease that affects Tangs and Angel fishes; they were healed in days



28. Top view of the hospital pyramid aquarium

Our safe diving practices were the “Five Never Roles”
We adhered to them blindly until we could find someone to teach us how to dive!

Role# 1 Never night dive

Role# 2 Never dive alone… ever

Role# 3 Never dive twice in one day

Role# 4 Never go up faster than your air bubbles

Role# 5 Never dive deeper than 33 feet (10 meters)

We dove and enjoyed the undersea life for many years using these 5 simple rules especially since any deeper than that, there is no red color! After a few

years we got scuba diver certification in Egypt.

Keeping the marine fish and inverts alive in their salt-water closed system environment taught me new knowledge like filtrations, water circulation, water and air pumps, tubing and pipes.
This knowledge was very helpful with the pyramid machine…yes let's get back to our pyramid story

Since we were experimenting with the pyramid shape, the glass marine pyramid aquarium was born (photo 26) with clown fish and their sea anemones, wrasses, butterfly fish, red Spanish dancers and green algae.

This aquarium was a bit intriguing to incorporate biological and mechanical filtration methods in addition to waterproofing the light in its capstone. It was worth it, we had a very beautiful and charming pyramid aquarium that even the fish loved. They lived happily there and they all grow very long and beautiful streamers behind their tails and fins.
All the fish looked fantastic, super healthy with no diseases or parasites ever in the 2 years period we had the aquarium.

Even when we had a wounded fish, we put it in the pyramid aquarium and all wounds would heal very quickly. And any fish food remaining in the tank never spoiled due to the sterilization effect of the energy. The fish ate it later when they got hungry.

It was like we can feel the fish and understand their language!

CHAPTER 3

LIFE ENERGY

Around the world and through history, humans knew and interacted with a form of energy that is mysterious and unexplained by science. Occult or knowledge of the paranormal and mind over matter, attracted many researches and power seekers through the ages. They found that this energy could be collected, stored, and manipulated by the mind to heal, harm and cause effect on the physical world; this considered a miracle to science.

This energy that eluded and defied science through the ages is also the energy of emotions, of telepathic communications, healing and levitation or antigravity.

The energy around the world:

INDIA: Yogis and Ayurveda know the energy as Prana, Kundalini, the Sleeping Serpent, Akasa and Vata. They know how to collect the energy and how to move it in their subtle body between the Chakras or energy centers, which are connected to the major organs and glands that govern all body functions.

The energy is collected from the air using special breathing techniques called Pranayama with visualization and is stored in the human body. It is used in healing and telepathy.

THE ORIENT: Zen, Taoism, Confucianism, Chinese and Japanese martial arts know this energy as Chi, Ki, Qi, Li and the Dragon. Acupuncture

is used to clear and correct imbalances in the flow of this energy through its channels and centers in the subtle body.

The energy is collected from the air using the fingertips as fine points for its entry. In other words, the fingertips act as a collecting tool, and moving the hands in circular motions while visualizing. The collected energy is stored in the human body to be used for telepathy and mind body coordination.

THE HUNA: Hawaiians and Polynesians know this energy as Mana or the spiritual energy and also the healing power, which exist in the air and also exist in some places, objects and people.

The energy is collected from the air using special breathing techniques with visualization and directed to the point of use usually healing. It is also used for mind body balance.

The Far East in general: the energy is collected from the air and stored in the body to be used when needed.

WESTERN EUROPE: Through the last two centuries many Europeans encountered this energy and called it many different names. The German physician Franz Anton Mesmer called this energy Animal Magnetism. The energy emanates or flows from a healer's hands and also from both Poles of the magnet. It is used for healing.

A second German scientist Baron Carl von Reichenbach had named this energy the Odic force or OD. Reichenbach used sensitive human beings to feel and see this energy emanating from magnets in dark rooms. He also collected this energy from the sunrays through wires to heal patients in addition to using the energy emanating from the healer's hands to heal others.

The very brave French scientist Leon Chaumery encountered this energy while using pendulums for detection and healing of the human energy system. He collected this energy using a group of wooden hemispheres

stacked on top of each other, then this energy divides or disperses into 2 poles and flows from both sides of the hemispheres. He called this energy pole flowing from the top “Positive Green” which has a healing and optimizing effect. The other energy pole “Negative Green” was underneath the hemispheres, and has a very powerful dehydrating effect that eventually killed him while experimenting.

EASTERN EUROPE and RUSSIA: Many scientists researched with this energy like Ukrainian biologist Dr. Alexander Gurvich who called it Mitogenic Rays and the energy emanates from plant roots.

Semyon Kirlian called it Bioplasmic energy. Kirlian discovered that all living beings radiate this energy (the aura) and it could be photographed using a special setup that is now called Kirlian photography.

He also found that oxygen in the air contains this energy and is taken by the living being for its life processes. Breathing techniques are used to charge or store the energy in the human body.

Czechoslovakian inventor Robert Pavlita called it Psychotronic energy and designed and built Psychotronic generators for over 35 years, the generators are devices for storing and applying this energy.

UNITED STATES of AMERICA: Many researchers worked with the energy like Wilhelm Reich who immigrated to the States from Austria and he called it the Orgone energy or Orgone.

He first discovered the energy in the human body then through experimentation it was found in free form in the atmosphere.

Orgone could be collected and magnified using an Orgone Accumulator box, which is compromised of alternating layers of metallic and organic materials. These alternating layered boxes enclose an inner air space where the energy is focused and collected or accumulated.

He used his high-energy ten’s of double layers Orgone boxes to control the weather, like dissipating clouds.

Safer Orgone boxes for human healing, with a maximum of three double layers, were used to treat diseases and eradicate cancer.

Another researcher Thomas Galen Hieronymus experimented with this energy and called it Eloptic energy from the two words electrical and optical; since it shows some characteristics resembling both. But it also has its unique properties. This energy emanates from all materials with different degrees and can be conducted by wires or as invisible waves.

In September 1940 he was granted US Patent# 2,482,773 under class 250-63 for his invention of “Detection of emanations from materials and measurement of its volume”.

Pyramid Power

Researches from around the world have found through thousands of repeatable experiments that the pyramidal shape identical to the Great Pyramid Pi incorporated ratios and aligned to the magnetic North collects in its internal space a special kind of energy that defies science. And they all agreed about one thing; the energy has a strong dehydration effect. They called it Pyramid Power.

Starting in the 1930’s, the French dowser Antoine Bovis built cardboard pyramids on the same ratios as the Great Pyramid. When he aligned them to magnetic north, he could preserve food when it was placed 1/3 of the height from the pyramid base.

In 1949, the Czechoslovakian radio engineer Karl Drbal was granted Czech. Patent # 91304 for a small hollow pyramid to sharpen razor blades when the blade was placed 1/3 of the height from its base, of an aligned replica of the Great Pyramid.
In 1970, a book was published “Psychic Discoveries Behind the Iron

Curtain" by the paranormal authors Sheila Ostrander and Lynn Schroeder. They introduced Karl Drbal's research to the west and started the worldwide "Pyramid Power" frenzy.

Many brave researches challenged the scientific community with their years of aligned pyramid shape experimentation intrigued by the strange energy behavior, its uses and applications.
In addition, the human mind- thought connectivity with the experiments performed, had them amazed at this old science.

The list of names for this strange energy is still long – like Vril energy, Life force, Life energy, Élan vital, Healing energy, Radionic energy, Spiritual energy and Vital energy.

Life Energy Characteristics:

These are the majority of Life Energy's characteristics to help you understand the energy, how to get it and what to do with it:

1) Exists throughout the universe
2) Accompanies solar rays
3) Fluctuates in its strength by cosmic, solar, lunar, season and weather conditions
4) Penetrates everything
5) Flows on earth from the west to the east
6) The primal life energy, the building block of all Other energies
7) Has some properties similar to other energies, but is a distinct energy by itself
8) Mass less, weightless and has no inertia like photon
9) Flows from low to high potential, opposite to electricity
10) Behaves like light but is not electromagnetic or visible, and Optical science could be used to study its interaction with matter. For example reflected by mirrors, condensed and focused by lenses…etc.

11) Has polarity, one is the healing / thought energy and the other is the power energy. Comparable with a magnet, which also has a polarity, in that one end, is the North Pole and the other is the South Pole. Also battery terminals: one is positive, the other negative
12) Conducted by all materials with a different rate of conductivity depending on the material
13) Higher potential is blue in color**…The Blue Light**
14) Strong dehydrating effect or the removal of water
15) Higher potential dissociate water to hydrogen and oxygen
16) Affects the weather
17) Sharpens cutting edges
18) Removes certain contaminants from different media
19) Detarnish certain metals
20) Stored in all materials like water, wood, stone and metals with different storage capacity per unit weight depending on the material
21) Stored in special shapes / materials using the human mind to charge it, like Pavlita generators, to be used by trained minds afterwards
22) Attracted to itself, from low to high potential
23) Attracted to water and anything having water
24) Attracted to living organisms
25) Attracted by mind thoughts and visualization technique
26) Collected and magnified using special alternating organic / metallic material boxes like Orgone boxes, where the energy is accumulated in its hollow center
27) Collected using special shapes: hollow or solid like hemispheres, cones and magnetically aligned pyramids where the energy, in all these shapes, after being collected, divides or disperses into its two poles. One is projected above the shape the healing / thought energy and the other is projected underneath it – the power energy
28) Emanates or flows from both poles of the magnet and when a sensitive human being views the magnet, the energy appears blue at the North Pole for healing and yellow/red at the South Pole for power, that is why magnets are used for healing and body energy balance

29) Emanates or flows from both poles of quartz and other crystals. The energy flows from their tips for healing and bases for power that is why they are used for body energy balance, healing, and telepathy worldwide
30) Emanates or flows from the human body especially trained healers' palms like laying on the hands healing or Reiki, from the fingertips, eyes and telepathically. The polarity of the energy is controlled by focused mind thoughts and visualization techniques
31) Felt and /or seen by subtle and psychic energy sensitive human beings
32) Can be tested and verified by dowsers using pendulums
33) A by-product of many chemical reactions
34) Charges the air around it
35) Found freely in the atmosphere and the air we breath
36) Found freely in fresh and salt waters
37) Found in the liquids we drink
38) Found in the food we eat
39) Stored and used in living systems to maintain health, body bioenergy balance, vitality and anti aging
40) Healing of wounds with less or no scaring
41) Sterilization effect
42) Enhances deep sleep with vivid and colorful dreams
43) Liberated in enormous amounts for the use of living organisms when in a life threatening stress situation
44) Collected and stored in the human body from the air using special breathing exercises and visualization
45) Collected and stored in the human body from the air by hands using circular motions and visualization
46) A still or empty mind - alpha state, is necessary in collecting, storing and directing it using visualization
47) Enhances and easiness of meditation
48) Could be directed by the trained mind's consciousness.
49) Enters into the dynamics of many PSI or Parapsychology (Paranormal) phenomena or Psychotronics with its 2 classes of Psi:

Psi-Gamma: Paranormal Cognition or Extra Sensory Perception (ESP) - receiving information

beyond the five senses abilities

Psi-Kappa: Paranormal Action or Psychokinesis or levitation

50) Enhances telepathy or the communication between living beings, animals and plants using other than the 5 senses or any other physical interaction
51) Energy charged water acts as a gentle medium to supply it. Charged water can be used as drinking water to benefit the body, as a face wash for anti-aging. It can be applied to wounds as a cleanser and fast healing
52) Increases plants growth, yield and disease resistance
53) Charged plant seeds are disease resistant, grow faster, are bigger, hardier with more nutrient and higher yields
54) Exist in some places, objects and people
55) It is the same energy of emotions like happiness, love, anger, worry, jealousy and fear. Emotions is often considered a state of mind and the driving force behind positive and negative motivation, in addition to its mind body or psychosomatic connection.

CHAPTER 4

SOLID PYRAMIDS EXPERIMENTS

As human beings “The Great Pyramid is a tomb” theory is an insult to our intelligence, especially after finding its precision and workmanship cannot be duplicated today. This means that those who built it were more technologically advanced than us in this regard, and possessed a technology unknown to us that enabled them to do this miracle in stone. That’s the reality of the matter whether we like it or not.

But why was the Great Pyramid built? To answer this question we will have to build one, a small sealed great pyramid model identical to the original one, with the same materials, precision and accuracy of the known parts, and we will need to figure out the missing parts or at least their functions, then precisely assemble it all inside a pyramidal shape, fill it to be solid, align it to the magnetic north and start experimenting.

This way the Great Pyramid will have the best chance to tell us why it was built, and it did tell us why, after over 30 years in research and over a dozen different solid miniature Great Pyramid models.

The fact that we will never know the real original missing parts that were installed in the Great Pyramid is very disappointing and sad, but from their locations, shapes and functional characteristics maybe we will have a chance to come close to the intended original design, and hoping through experimentation, to produce results that are repeatable, dependable and

desirable, and finally decipher the pyramid's purpose.

I adopted the motto "The failed experiments are as an important part of the process of reaching the successful experiment that finally works" during all my experimentations.

I really tried very hard for many years to reach the correct design of the system parts and functions as the original design and purpose of the builders. I also tried to figure out some of these missing parts or at least their functions. Through books and other researcher's documents, through experimentation, through logical parts functions, through the signs left behind as evidence from a working pyramid and through meditating and extra sensory perception in all the Great Pyramid locations for many long hours through hundreds of trips inside and around the Great Pyramid.

When people passed by me just sitting there for hours, they thought I was crazy, and what will I do when I go to Luxor and see drawings in full color?

In the next few pages are a brief summary and pictures of the solid pyramid system models used and their internal components during the Great Pyramid System deciphering time:

- All the spaces inside the solid Great Pyramid became the system's main components and its connecting pipes in a completely sealed and tested under pressure, closed system

- All models are 1:365.2422 scale of the Great Pyramid size, measuring 25 inches (63 cm) base side length

- All models are solid, filled with a special limestone mixture, except model 1

But the "Great Pyramid System Technology" is in the next chapter.

Pyramid System Model 1

“The First Pyramid”

29. Pyramid System Model 1

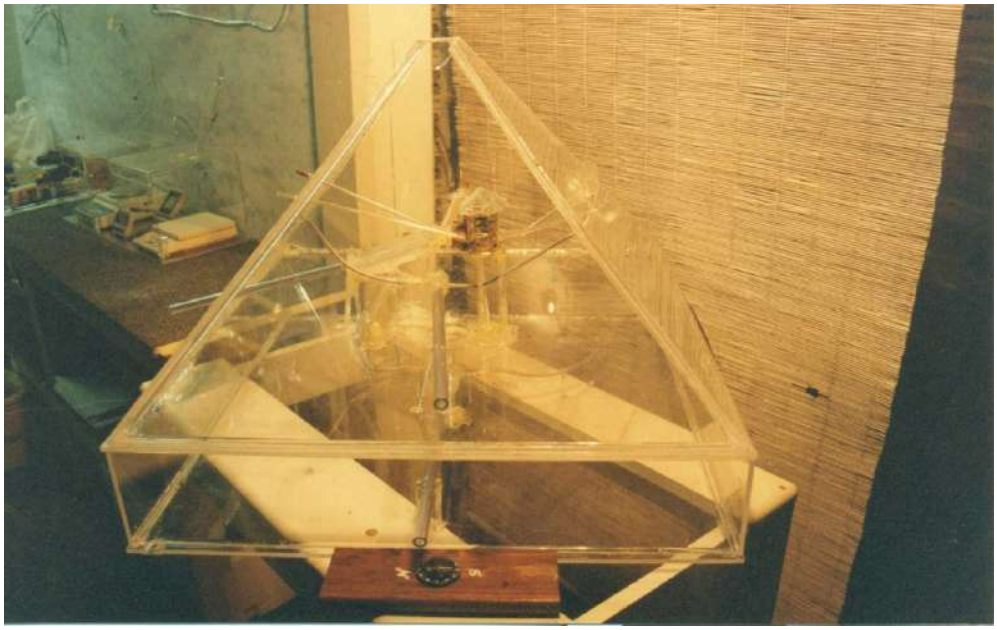
The precious Pyramid System Model 1, it was the real start of the journey to deciphering the Great Pyramid System.

Model 1 is so primitive and missing a lot of parts, when we look back years later. It is a glass 11/2 feet (45 cm) base side length pyramid, without a Water Mirror underneath it, but had a capstone mirror and its Gases Separation Tower - GST was a ¾ inches (1.9 cm) piece of clear plastic pipe. It was the first pyramid ever, to have a granite Energy Pump with a Venturi suction pump incorporated in it, in a sealed closed system. An air pump was used to prove that the Venturi suction pump in the Energy Pump is functional, which it did and raised the water from the Water Mirror and sprayed it in the air

from the Southern Air Pipe outlet. No filling material was used in this first model, since I did not know how it works at that time. This model did not function for long and the little energy it produced went directly in the ground underneath it.

Pyramid System Model 2

“The Fiber Optics Pyramid”



30. Pyramid System Model 2

This model was a leap in advancement in comparison to model 1.

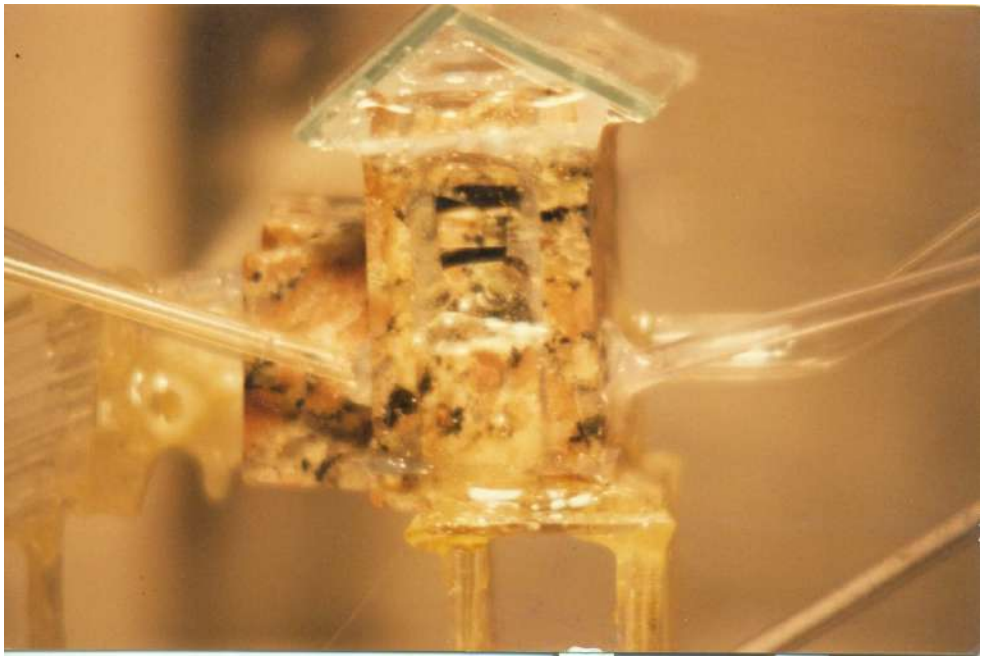
It has a Water Mirror underneath it, but no top mirror, the Gases Separation Tower - GST had internal notches to hold water droplets! and two manual valves.

The Hydrogen Generator – HG, had a quartz crystal in the niche.

As for the granite Energy Pump it is better made, have 5 top condenser cylindrical lenses and for sure a Venturi suction pump. The roof was made

from glass which broke from the energy during experimentation.

This pyramid model will be solid with all the problems involved with that, like for example, once filled with the mixture, it will be dark inside making it impossible to see and monitor any water levels inside its components, so it must have internal light.

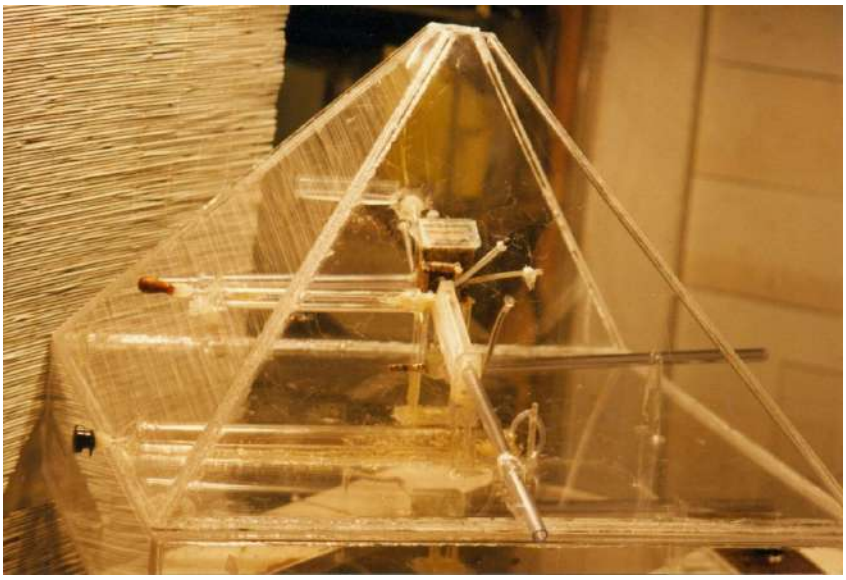


31. The granite Energy Pump of Model 2

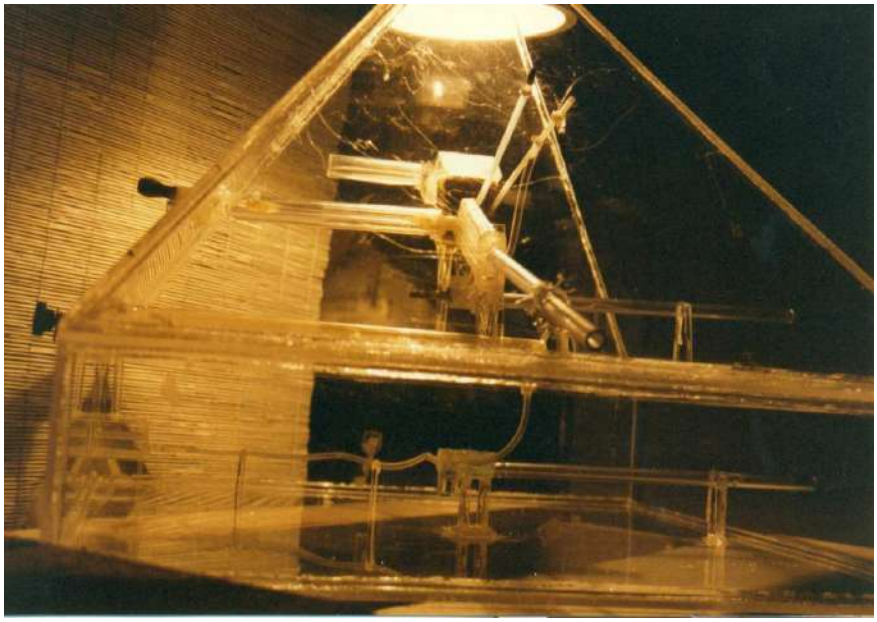
32. GST and HG of Model 2

I really did not want to use wiring with lamps to illuminate the internal components because of the interference of the electricity in these wires with life energy. So it was time to use a light box with lenses that I built and a few strands of fiber optics.

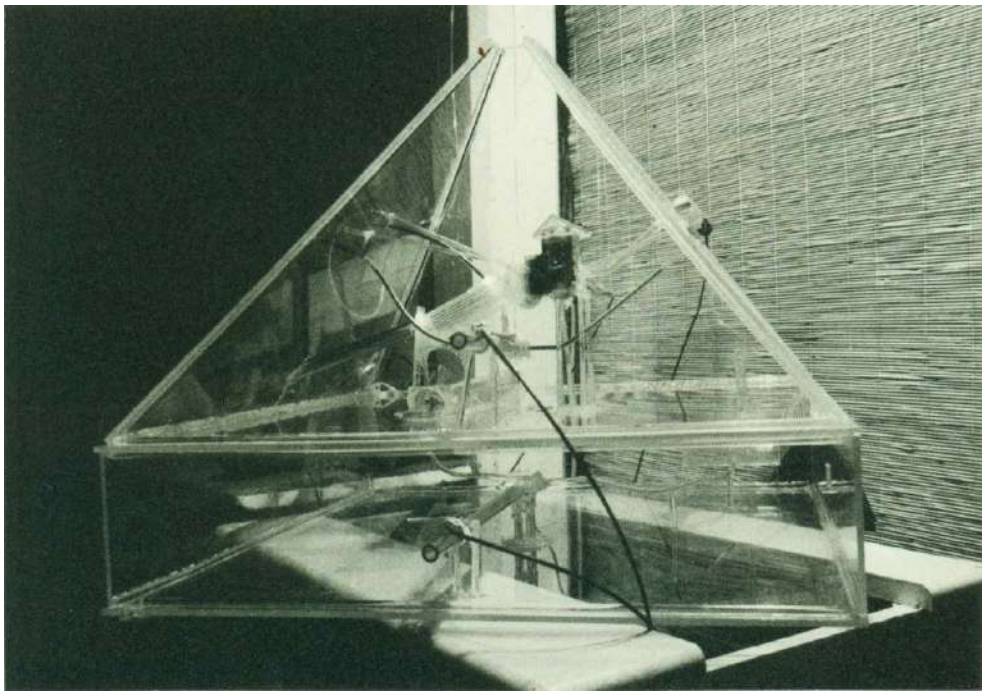
The fiber optics illumination worked great in illuminating the components. I also built valve rooms so the filling material would not hinder their rotation and use.



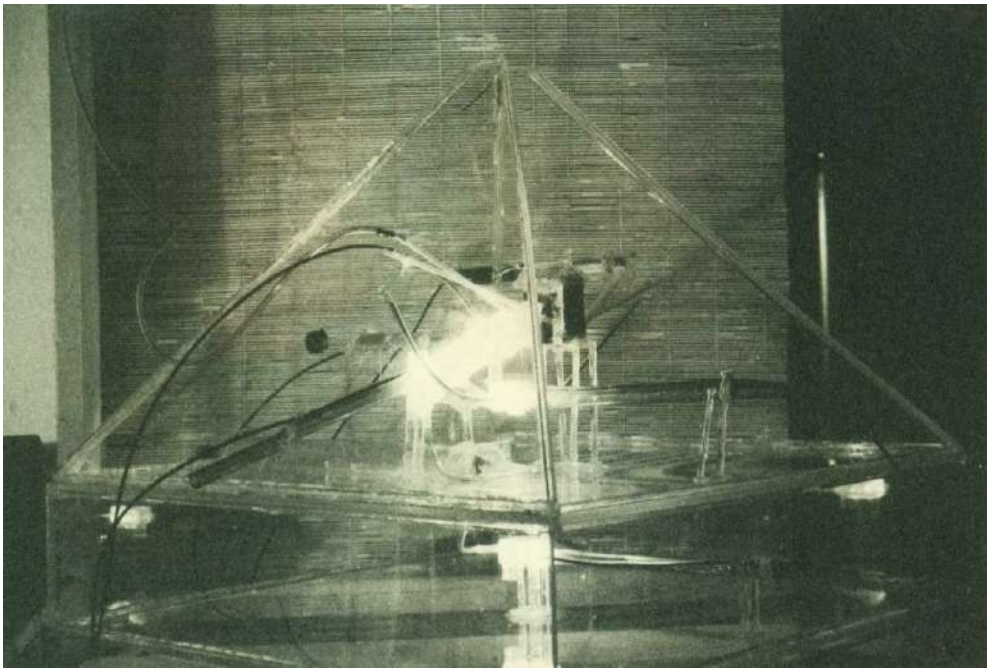
33. Assembly of Model 2, notice the valves handles outside of the pyramid and the “Look in tubes” to monitor the water levels inside all pyramid components



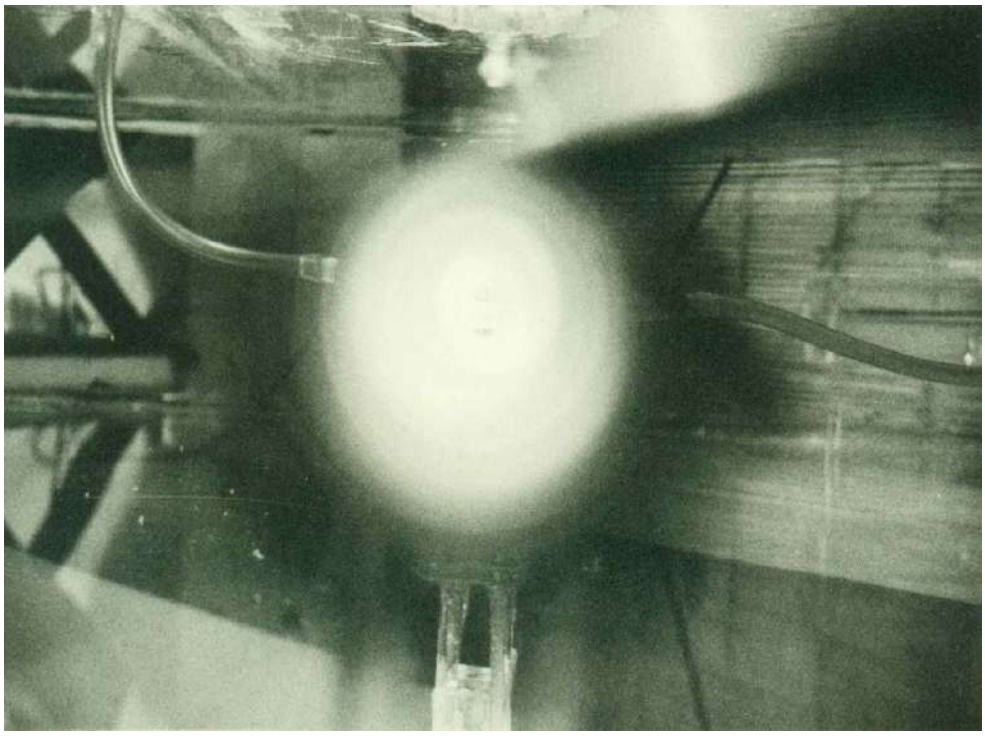
34. The Water Mirror in place under the pyramid - Model 2



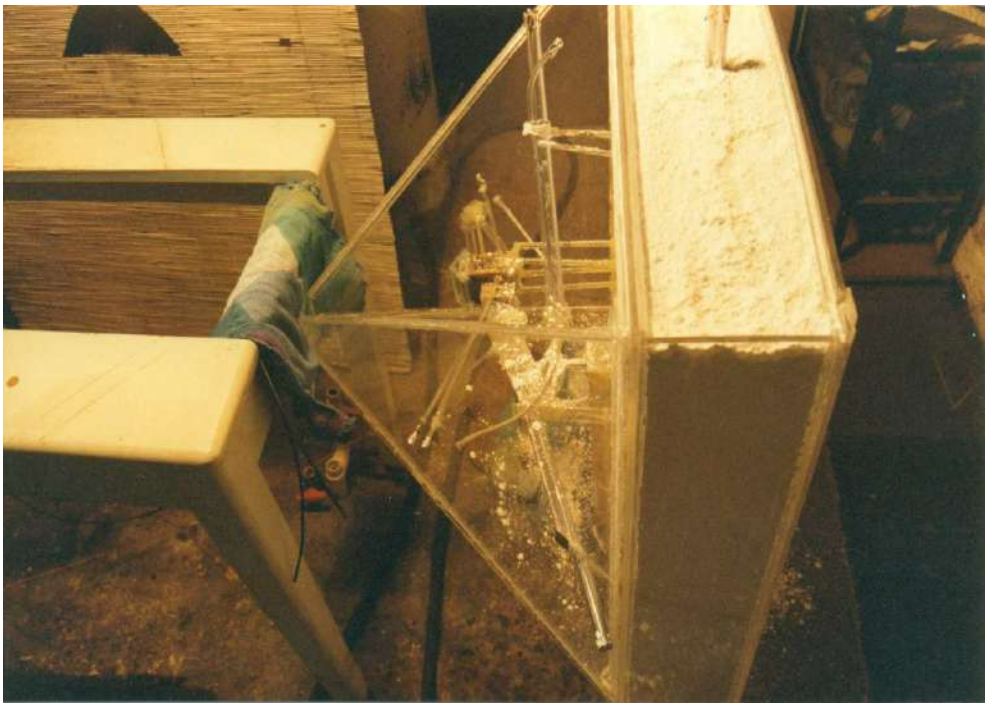
35. Fiber optics test illuminations before filling Model 2



36. Fiber optics illuminating all pyramid system components, and all are working great in Model 2



37. The water level illuminated inside the Water Mirror through the “Look in Tube” in Model 2

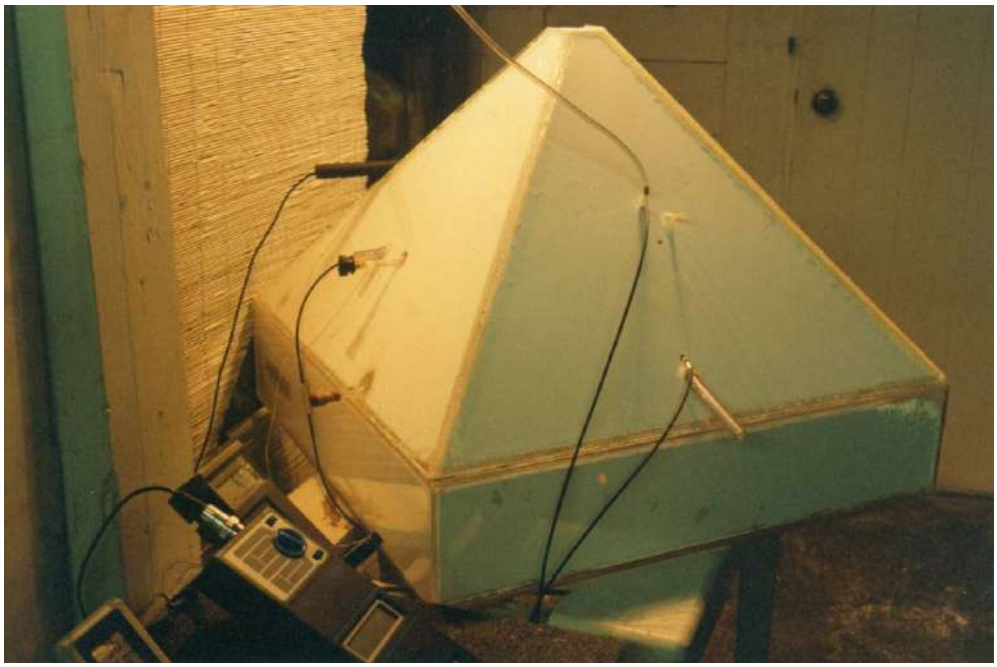


38. Filling the pyramid base on its side with the mixture to make Model 2

Solid

39. After filling the base with the mixture, now filling Model 2 pyramid

40. Solid Pyramid System Model 2



41. Experimenting with the solid Pyramid System Model 2 using fiber optics to illuminate the internal components

Pyramid System Model 4

“The Sun Pyramid”

42. Pyramid System Model 4

This model was working outdoors, and I got energy shocked a few times from this very powerful pyramid, I was being energy shocked by**…The Blue Light**

I really didn’t realize in the beginning that **the energy in high potential has Blue color**until it was time to take the machine indoors. It was after sunset during the disassembly and the temperature wires were still attached to all components, and while emptying the filling mixture – **it happened – I saw a blue lightning moving in pulses inside these transparent covered wires.** Any disturbance to the mixture inside the pyramid caused this electricity look

alike, to move in the wires.

At this second I realized:

This Machine is an Energy Generator

When the Energy Pump was taken out, its glass top was broken,

The Blue Light was so powerful that it broke the glass

This model had many new and better features than the ones before it, like for example the Water Mirror is connected to a leveling water reservoir, to replenish its water automatically.

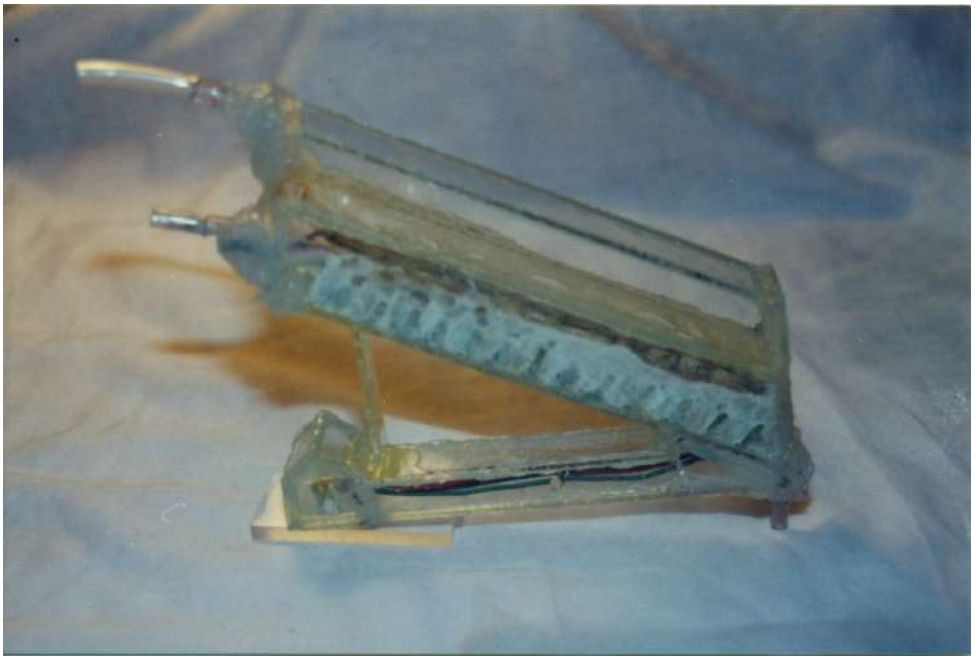
Temperature was monitored in all system components when needed in addition to monitoring the air speed and volume to the Venturi suction in the Energy Pump.

43. The granite Energy Pump of Model 4

44. Filling the pyramid and its base with the mixture to make Model 4 solid

45. Solid Pyramid System Model 4 during experimentations

Pyramid System Model 5

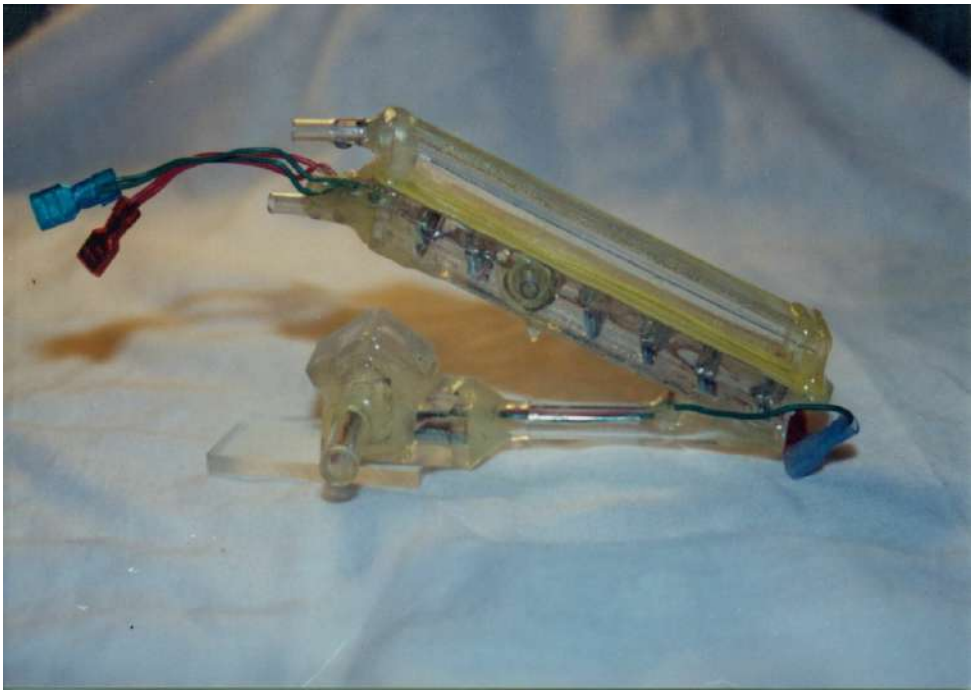


46. GST and HG of Pyramid Model 5, notice the white salt from all the water activated batteries

Pyramid Model 5 had GST with 26 Zn/Cu water-activated batteries (13 cells on each side), a gas separator membrane and HG with Zn/Cu water activated battery in its Niche. Salt water was used as the electrolyte.

So it had electricity (0.5-0.7 Volts DC) per cell, but no place for any water dissociation cells in the system, or even to hold water.

Pyramid System Model 6



47. GST and HG of Pyramid Model 6 with battery testing outlets

This model GST had 14 water dissociation cells (7 cells on each side), a gas separator membrane and HG with Zn/Cu water activated battery in its Niche.

This HG battery produced 0.5 -0.7 Volts DC and did dissociate water in GST to hydrogen and oxygen using less than half the energy required, supplemented with life energy from the machine.

The Pyramid Machine is working… Finally

Pyramid System Model 7

"The Working Pyramid"

48. Pyramid System Model 7 that worked on May 24th 1997

Model 7 had all new components in addition to 7 pressure and vacuum gauges to monitor the gases pressures anytime throughout the system. In addition to monitoring components temperatures as needed.

The water weight entering the pyramid-closed system is being monitored to accuracy of 0.01 gm to keep track of every drop of water (0.07 gm) that dissociates to hydrogen and oxygen, the time it took and the electricity used. In addition to other parameters like room temperature, humidity, time of day, weather condition…etc.

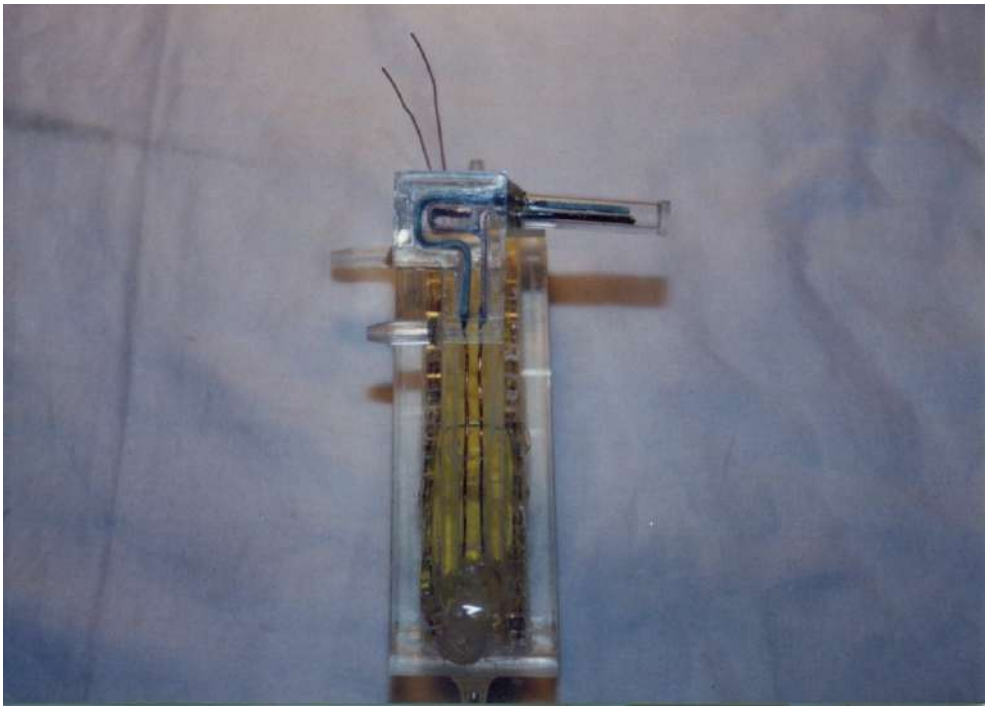
This model worked well in dissociating water continuously to its gases using less than half the electricity required supplemented with the free renewable energy generated by the pyramid system.

49. Pyramid System Model 7 components

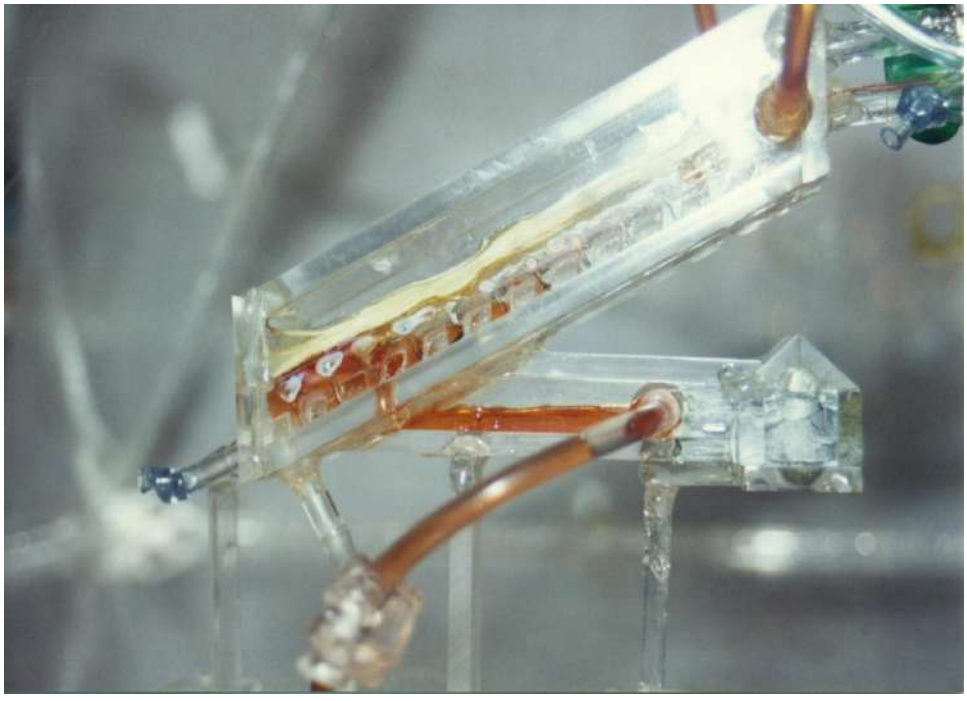
50. The granite Energy Pump with a limestone top of Model 7

51. Model 7 GST with 24 water dissociation cells (12 cells on each side) in

addition to hydrogen / oxygen separator membrane and HG with a Zn/Cu water activated battery in its Niche and extending behind it



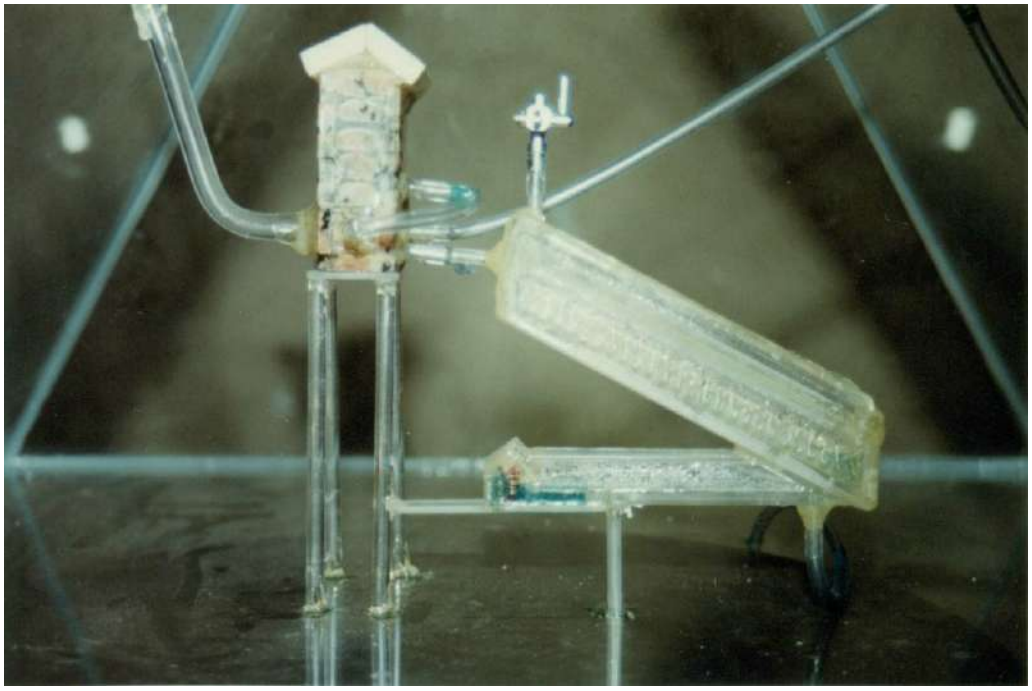
52. GST & HG of Model 7 - bottom view



53. GST during water dissociation (using orange colored water), notice that the top cells in GST - in the centerline of the pyramid - are empty of water, even when water entrance is above them

Pyramid System Model 8

“The Gold Pyramid”



54. Pyramid System Model 8 internal components

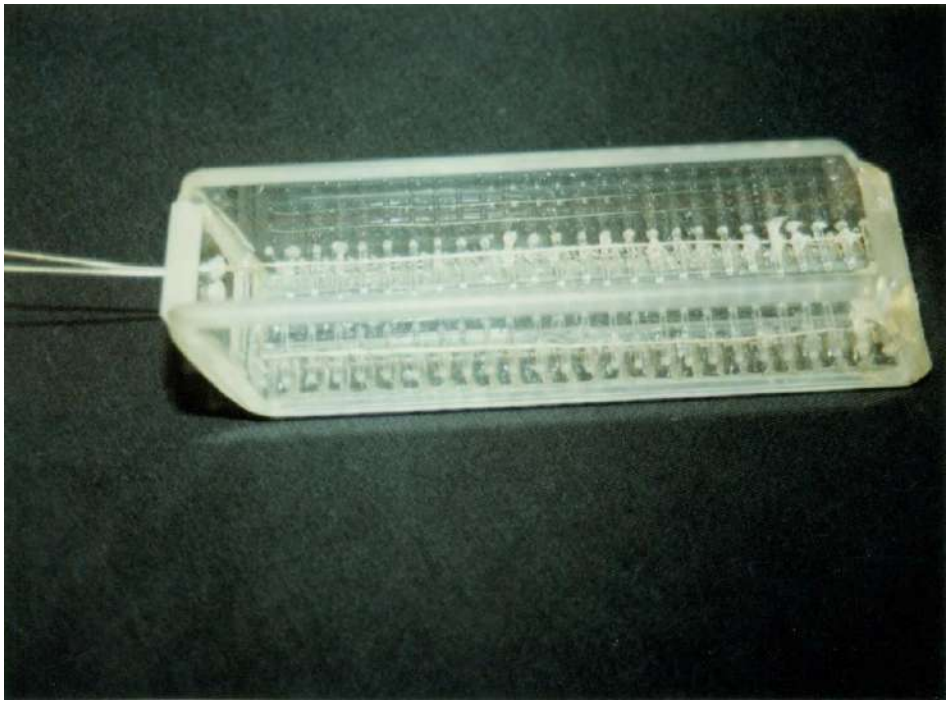
This model had 24 k Gold plated Silver electrodes and energy lines in addition to 2 Red Ruby Rods in HG’s Niche and blue water.

It was the star in the Arab Inventors Conference in Cairo, Egypt, December, 1999.

Pyramid System Model 8 was used to demonstrate the Pyramid System Technology, and it worked well in dissociating water to hydrogen and oxygen. All the physicist and chemists took their time to study its unique

pyramid design and technology in addition to verifying the gases produced.

55. GST Model 8 with top hydrogen outlet and valve during changing the HG's Niche red ruby rods to water-activated battery



56. GST Model 8 with 50 dissociation cells (25 cells on each side) and the 24 k Gold plated Silver electrodes and energy lines

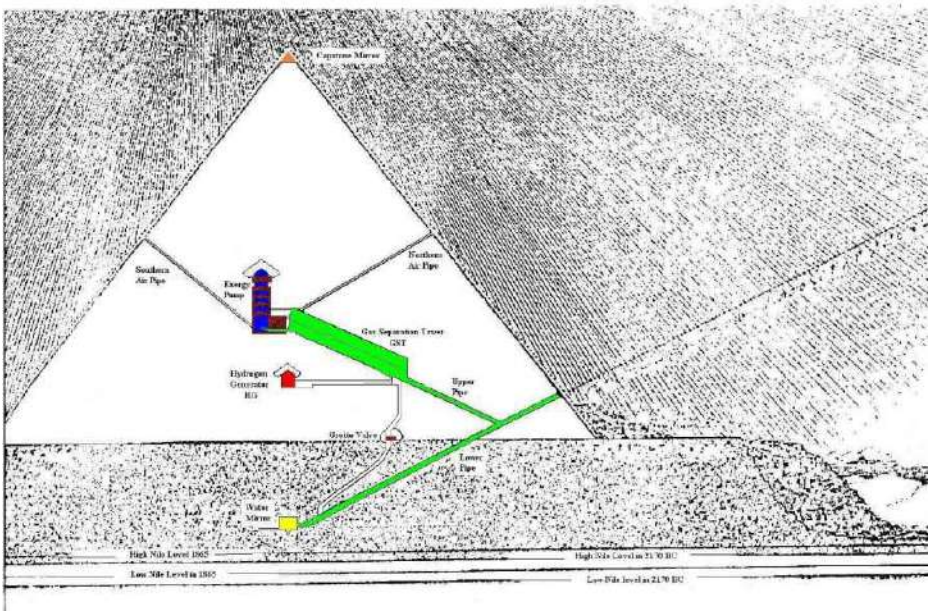
The Evidence

CHAPTER 5

The Great Pyramid System Technology*

Ancient forgotten technology to generate energy



70. The Great Pyramid System vertical section, north-south, looking west

showing Solid Pyramid (white) & Components (color coded):
Water Mirror (Yellow), Energy Pump (Dark Red), HG (Red),
GST, Upper & Lower Pipes (Green), Capstone Mirror (Orange)

“It is a System that attracts, collects, absorbs, amplifies, condenses, focuses, directs, and stores Life Energy”

Life Energy is The Blue Light

The Great Pyramid System has:

- A set of components forming an integrated whole
- An earth magnetic field aligned and horizontally leveled seven-sided concave unique solid pyramid shape to contain its components
- A behavior which involves inputs, processing and outputs of materials and energies
- Interconnectivity between its various components for functional and structural purposes

The System Attracts the atmospheric energy in the air:

a) **Attracts the atmospheric energy in the air** to the pyramid's high energy outer cladding or covering stones

b) **Attracts the atmospheric energy in the air** to the pyramid's internal very high energy:

- The internal very high energy of the Energy Pump
- The internal very high energy contained between the mirrors

c) **Attracts the atmospheric energy in the air** to the water inside the pyramid:

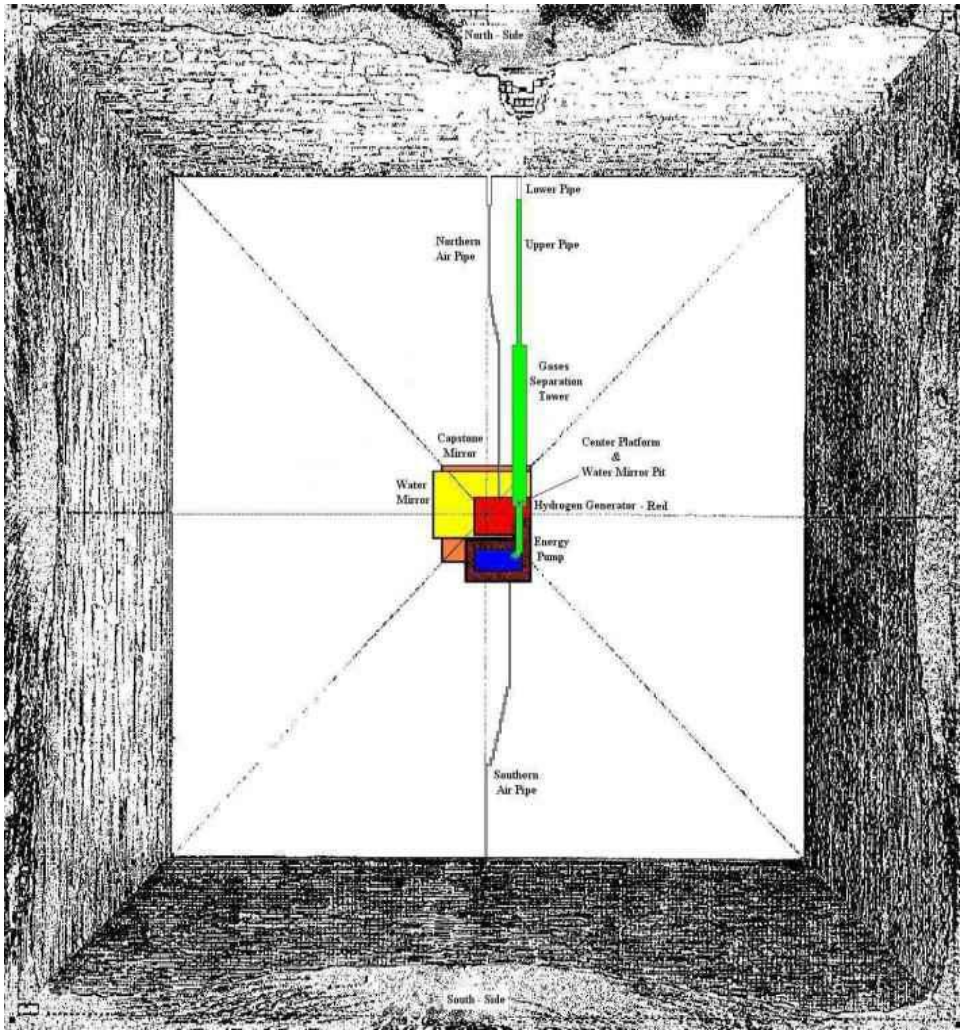
- The water in GST

- The water in HG

The System Collects the energy rays:

a) **Collects the energy rays** through all its surfaces from sunrays

b) **Collects the energy rays** passing west to east on earth.



71. Plan of the Great Pyramid System overlapping components Water Mirror (Yellow), Energy Pump (Dark Red), HG (Red), GST, Upper & Lower Pipes (Green), Capstone Mirror (Orange)

The Blue Light

The System Absorbs the atmospheric energy in the water of the Nile River supplying the Water Mirror to the pyramid's internal very high energy contained between the mirrors

The System Amplifies the energy:

a) **Amplifies the energy** when passing on its gain medium materials, and depositing the amplified energy in its internal spaces

b) **Amplifies the energy** when passing on its gain medium materials between the two mirrors

The System condenses the energy in the Energy Pump spaces and in the components' inner spaces in general

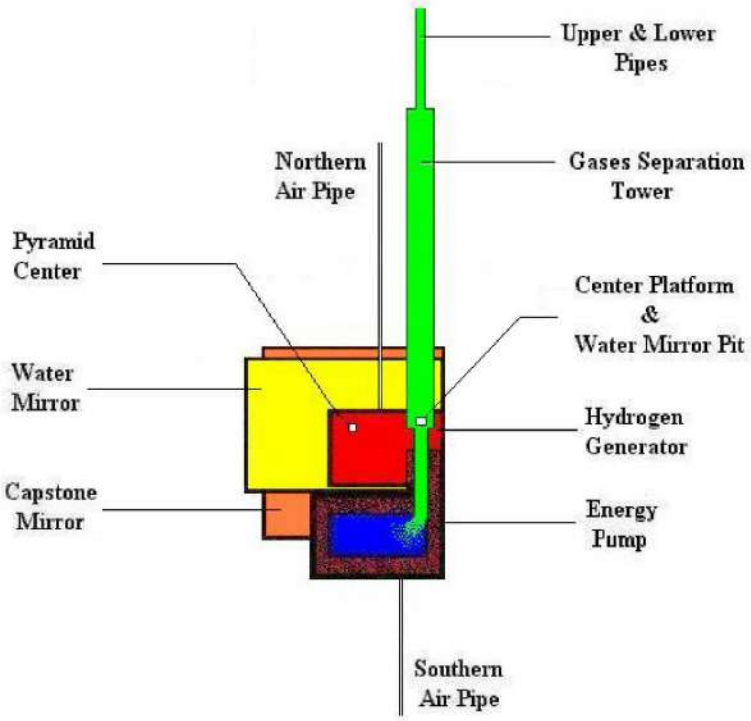
The System Focuses the energy in the Energy Pump; the center of gravity of this seven-sided unique pyramid shape

The System directs the energy from its center of gravity or the Energy Pump in the unique pyramid shape, it disperses the energy to its two poles from the centerline of the pyramid, one the healing and thought energy is directed upward while the other the power energy is directed downward, the dispersed energies reflect on the mirrors and is contained between them

The System Stores the energy:

a) **Stores the energy** in the pyramid's massive six million tons of gain medium materials

b) **Stores the energy** between its two mirrors, the bottom Water Mirror and the top Capstone Mirror



72. The Great Pyramid System overlapping components Water Mirror (Yellow), Energy Pump (Dark Red), HG (Red), GST, Upper & Lower Pipes (Green), Capstone Mirror (Orange)

The Blue Light

Summery of The Great Pyramid System

Components and their Functions

1) Pyramid

- Contains system components
- Solid with its materials
- Energy attractor
- Energy collector
- Energy amplifier
- Energy focuser
- Energy director

2) North face concavity

- Air collector
- Air director

3) Energy Pump

- Suction pump
- Energy condenser

4) Water Mirror

- 1st water reservoir
- Bottom water mirror
- System On-Off switch
- Energy absorber
- 1st Water dehydrator & dissociator

5) Lower & Upper Pipes

- System aligners
- Primary gases separation pipes

6) Grotto Valve

7) Hydrogen Generator - HG

- 2nd water reservoir
- 2nd water dehydrator & dissociator
- Has two overpressure relief valves

8) Gases Separation Tower - GST Inlet Valves

- The Grotto pipe top outlet
- The Upper Pipe valve
- The Hydrogen Generator valve

9) Gases Separation Tower - GST

- 3rd water dehydrator & dissociator
- Gases separator

10) Pure hydrogen to Energy Pump

11) Gases Separation Tower - GST Exit Valves

12) Top Capstone Mirror

Details of The Great Pyramid System Components, their Functions and System Behavior

1) The Solid Pyramid

Horizontally leveled square base solid pyramid shape with dimensions ratio that incorporates the Pi mathematical constant (the ratio of a circle's circumference to its diameter), thus achieving a unique surface slope angle of 51 degrees and 51 minutes for its sides.

The solid pyramid contains system components in their appropriate locations in the pyramid and to each other, including the missing capstone top mirror and the external bottom mirror in addition to its piping system.

The solid pyramid is a seven-sided pyramid shape. The north face triangular side is concave made of three triangles with a straight base line, while the other pyramid three triangular sides, west, south and east are also concave, and they are made of two triangles each with a concavity in the centerline to the base line.

The solid pyramid east and west sides are parallel to the earth's north magnetic field.

The pyramid is solid except for spaces inside its components and connecting pipes and composed of inner limestone material and outer cladding or covering stones of dense Tura limestone material.

The pyramid attracts the energy

From the atmospheric energy rich air to its dense outer cladding or the covering stones.

73. Sunrise reflection on the only remaining outer cladding or covering stones that is still intact on the northern face of the Great Pyramid

74. The Great Pyramid cladding or covering stones with angle of slope of 51 degrees and 51 minutes

The pyramid collects the energy

- **Collects the energy rays** accompanying solar rays where it will be attracted by the internal very high energy of both the Energy Pump and the energy contained between the mirrors.

- **Collects the energy rays** passing west to east on earth through its western surface side. The energy gets concentrated in the pyramid center of gravity or the Energy Pump.

The pyramid amplifies the energy

When passing on its gain medium materials and deposits the amplified energy in its internal spaces.

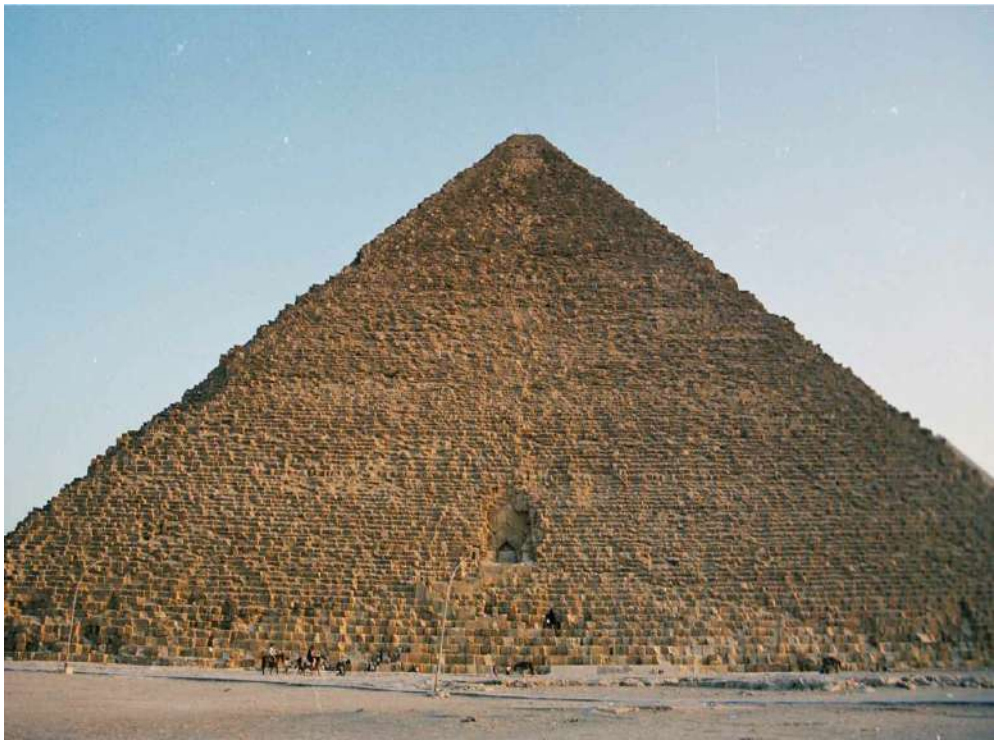
The pyramid focuses the energy

Using a seven-sided unique pyramid shape, that focuses the energy in its center of gravity or the Energy Pump.

The pyramid directs the energy

From its center of gravity or the Energy Pump in the unique pyramid shape, it disperses the energy to its two poles from the centerline of the pyramid, one the healing and thought energy is directed upward while the other the power energy is directed downward. The dispersed energies reflect on the mirrors and contained between them.

2) The North Face concavity



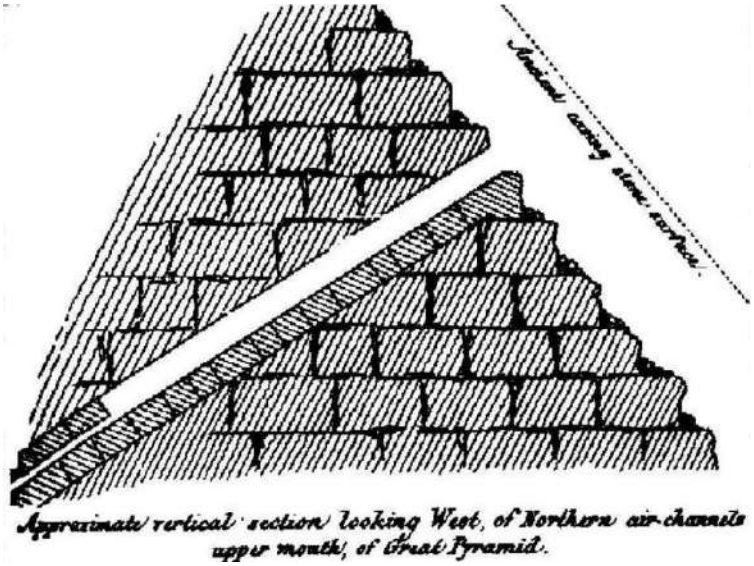
75. The only picture worldwide taken by the author in Spring Equinox, when sunrays at sunset are parallel to the northern face of the Great Pyramid. It shows clearly that this 5-acre triangular surface is not 1-triangular plane but a concave surface made of 3-triangular planes with three different coloration (due to the special light angle during that time).

The original smooth northern face of the Great Pyramid is made of three triangles forming a concave surface area of 5 acres with an air entrance on the centerline and at 55% of its face height.

Architectural engineers confirmed that the smooth northern face design of the Great Pyramid building will acts as an air collector, and also acts as an air director, directing the air inward towards its centerline and upward to its air entrance. The area below this air entrance is a massive 4 acres.

In addition mechanical engineers confirmed that the air collected and directed to this large air entrance with its special design and the reduction in size of the Northern Air Pipe as it passes through the pyramid, will pressurize the air flowing through it allowing the function of the Venturi effect design in the granite Energy Pump.

Northern Air Pipe Inlet:



76. Northern Air Pipe inlet on the pyramid northern face

A large 4 x 4 feet (1.22 x 1.22 meters) square opening in the pyramid northern face centerline between west and east, and at 55% of its height. This inlet allows the atmospheric energy rich air to enter the Great Pyramid System.

Once the air enters the pyramid through this large entrance for 10 feet (3 meters) at a 33 degrees angle to the horizontal, this pipe gets smaller reducing in size to 8.3” x 5.7” inches (20 x 15 cm) that helps the air to get compressed while flowing through this 232 feet (70 meters) air pipe to reach the Energy Pump.

77. Amgad Genena and Abd Elrahman Genena my best friends in front the Great Pyramid northern face concavity in Spring Equinox, notice the different colors of the pyramid face

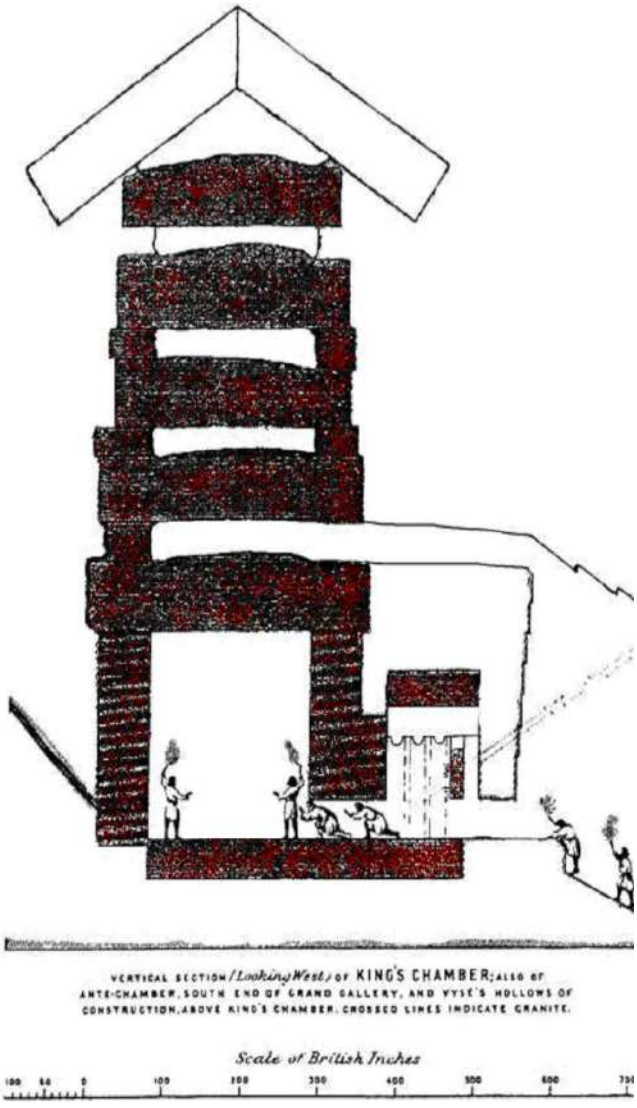
The design of the northern air pipe angle is the shortest distance to get the air from the surface of the pyramid to the Energy Pump, and the hardest to implement on an angle through the rock courses. In addition, this pipe deviates laterally a few times through its length for a total of 20 feet (6 meters).

In addition to the northern face concavity, the other three faces also have their concavities but each is made of a 2-plane concavity.

The concavity or the indentation angles of all 4 faces of the pyramid are of the same value, which is 179 degrees that measure to about 38 inches (1 meter) concavity in the centerline.

The pyramid concavity or indentation design is an inherent character, which helps to focus the energy in the Energy Pump

3) The Energy Pump



VERTICAL SECTION (Looking West) OF KING'S CHAMBER; ALSO OF
ANTE-CHAMBER, SOUTH END OF GRAND GALLERY, AND VYSE'S HOLLOWS OF
CONSTRUCTION, ABOVE KING'S CHAMBER. CROSSED LINES INDICATE GRANITE.
Scale of British Inches

78. The Great Pyramid Aswan red granite Energy Pump measuring 75 feet (23 meters) in height

79. The Pyramid System Model Aswan red granite Energy Pump measuring 2-1/2 inches (6.3 cm) in height, 1:365.2422 scale of the Great Pyramid

In the picture above, the north wall has three small pipes to enter the Energy Pump, the first bottom pipe is for system gases entrance from GST, the second middle pipe is for the Venturi pump entrance from the air supply, and the third top pipe is for the pure hydrogen inlet from GST.

The east wall has a small pipe for pump pressure monitoring and the south wall has a large pipe for the Venturi outlet (system gases exit pipe).

The Energy Pump, this marvel made of firestone or granite is placed in the pyramid center of gravity or 1/3 of its height from the base, extending from 29% - 42% of the pyramid height and almost centrally located between its four sides. In addition, the Energy Pump is at the center of its two mirrors,

the bottom Water Mirror and the top Capstone Mirror; it is exactly in the center of the mirrors like a laser pumping system.

80. Aswan red granite

Granite the Firestone

Origin: The word “Granite” is derived from the Latin word “Granum” meaning a grain that relates to the rock’s texture and not to its mineral composition.

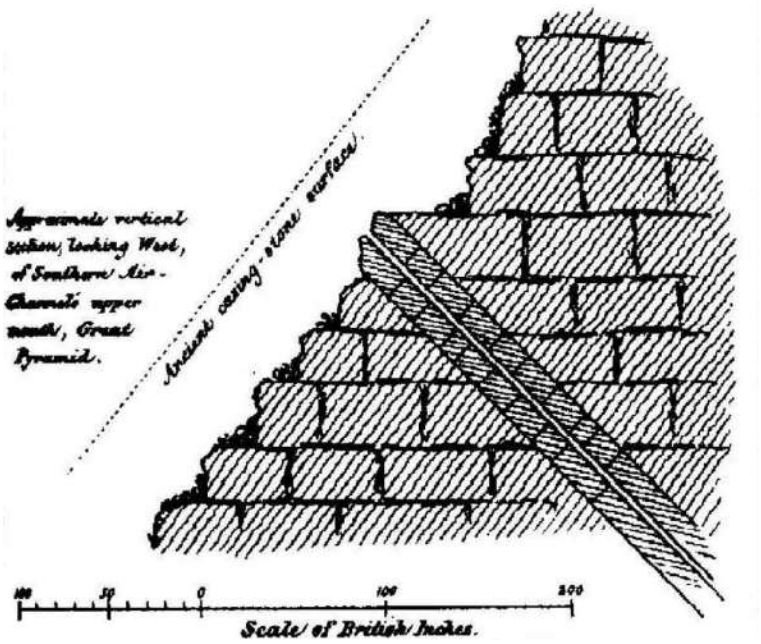
This granular rock is of igneous origin (derived from the Latin word igneus or ignis meaning fire), and it must have at least 20% quartz by volume to be considered granite.

Composition: Granite is composed of 2 essential minerals, quartz and feldspar in addition to one or more accessory minerals of the mica, amphibole or pyroxene groups.

The Energy Pump is a suction pump

To really start talking about a pump, where and how, lets see the features of the Southern and Northern Air Pipes leading to the granite Energy Pump:

Southern Air Pipe Outlet:



81. Southern Air Pipe outlet on the pyramid southern face

This pipe outlet is on the pyramid southern face centerline between west and east, and at 55% of its height. It is at a 46 degrees angle to the horizontal.

Southern Air Pipe Venturi Outlet:

82. Southern Horizontal Air Pipe exit from the Energy Pump

It begins inside the Energy Pump with a large bowl like opening with a width of 17.5 inches (44 cm) and a height of 23 inches (58 cm). This bowl like opening is exactly across the room from the entrance of the Northern Air Pipe.

The Southern Air Pipe gets smaller in size to 8 x 6 inches (20 x 15 cm) and continues south on a horizontal level for 6 feet (1.8 meters); then it deviates upward for 174 feet (53 meters) to exit the system.

This pipe deviates laterally a few times through its length, for a total of 20 feet (6 meters), to exit on the centerline between west and east.

Northern Air Pipe Venturi Entrance:

83. Northern Horizontal Air Pipe entrance into the Energy Pump

The northern face of the Great Pyramid Collects and directs the atmospheric air to enter the system (Refer to diagram 76 and the descriptions of the Northern Air Pipe for more details).

This pipe deviates laterally a few times through its length, for a total of 20 feet (6 meters) east of the centerline. The air pipe enters the Energy Pump with a 6 foot (1.8 meters) horizontal pipe.

The Venturi Pump

In 1983 in Egypt, while working with marine fish aquariums and their filtrations, a 2-inch (5 cm) plastic Venturi pump used in protein skimmer filters to inject air into the water stream attracted my attention. What a simple pump that uses nature laws to perform its function.

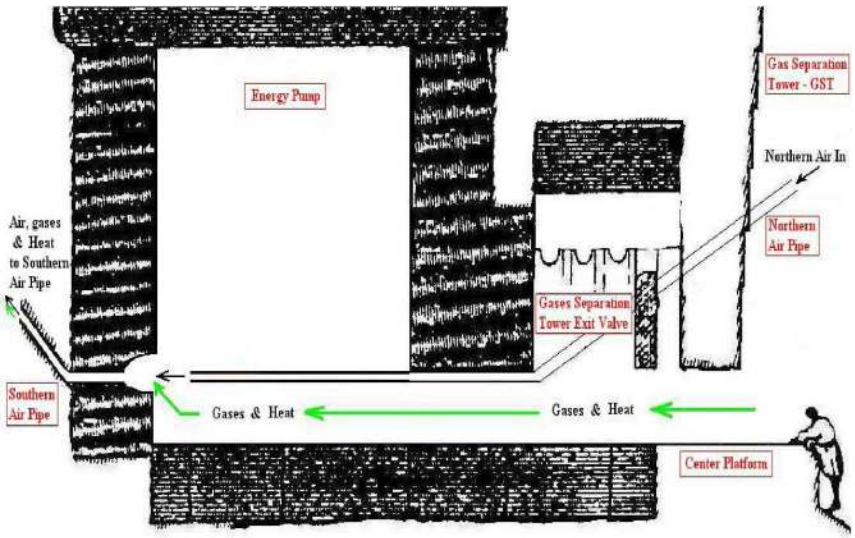
84. A plastic Venturi pump used in a marine aquarium protein skimmer to inject air into a water stream and also it can inject water, water vapor or gases into an air stream

Ten years later in USA, after discovering the Great Pyramid northern face concavity, air collection and direction to the granite Energy Pump on a horizontal level, it was this horizontal level aspect that helped made the connection that the Energy Pump is a simple Venturi pump design to reduce the chamber pressure and to allow the formed gases from the machine to exit the system.

If the inlet and the outlet of the air channels inside the Energy Pump are angled and not horizontally in front of each other, the air flowing cannot be contained, and the Energy Pump will act as an air pump that will pump air into all system components.

When air is injected under pressure through a pipe with a decreasing section, it speeds up, generating a pressure drop at the narrowest point due to

Bernoulli’s principle.



85. The granite Energy Pump Venturi Pump

The reduced pressure, due to the pressure difference between the two points, sucks up gas or liquid from the room around it into the moving gas flow, and projects it forward.

This Venturi pump design was implemented in the pyramid system granite Energy Pump, for its air pipe inlet and outlet, causing a reduced pressure or suction in the granite room around it.

The Energy Pump is an energy condenser

When the energy passes through the solid pyramid material, it gets amplified and condensed in the spaces of the Energy Pump.

In addition to the energy collected and focused in the pyramid shape center of gravity or 1/3 of its height from the base.

And since the Energy Pump is in the center of gravity of the pyramid above, it directs its energy to the centerline underneath the pyramid towards the

Water Mirror.

4) The Water Mirror

What a strange space dug in the bedrock 108 feet (33 meters) under the Great Pyramid and 25 feet (7.6 meters) above the high Nile water level.

The Lower Pipe leading to this space is 366 feet long (111 meters) with a deviation of 1/3 an inch (8.5 millimeters) from the straight line, unbelievable precision, but why?

86. The north wall of the Water Mirror showing the Lower Pipe entrance high above its floor level

Why go through this almost impossible task in digging this precise long pipe leading to a space so deep under the pyramid like no other pyramid in all of Egypt?

This question haunted me for years trying to answer it; till I went in this space and saw the circular crystals on its walls, strange circular crystals, they tasted like salt because they are “Salt Crystal Rings”. Was this space under water or had water vapor in it causing these salt crystal rings to grow in it? Must be. But How it had water and the Nile river water level even at its highest during the flood time is still 25 feet underneath its floor.

So may be there is a special water delivery system to bring water to this space. But why?

87. The Water Mirror looking west with portions of the safety fence surrounding a 12 feet (3.7 meters) deep pit

Let's see some features of the Water Mirror:

1- The Lower Pipe enters the Water Mirror three feet (0.91 meters) above its floor level

2- It has a very rough and uneven floor

3- It has a deep hole that extends 12 feet (3.7 meters) underneath the floor level and leading no where

4- It has a dead end pipe in the south wall at the floor level that extends southward horizontally for 53 feet (16 meters)

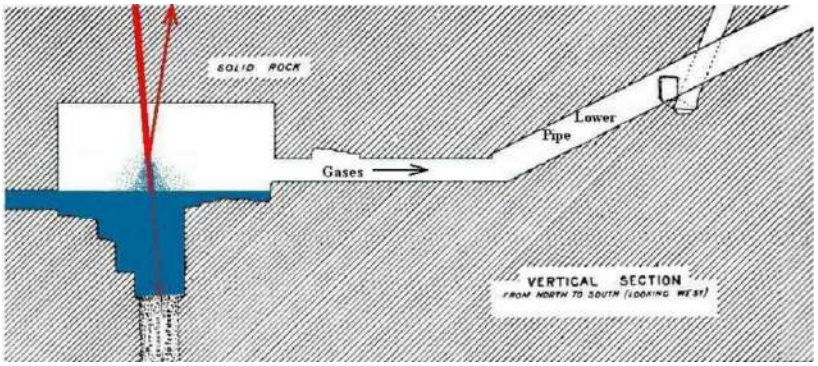
5- It has a second dead end pipe in the west wall and almost at ceiling level that extends westward for one foot deep

6- It has "Salt Crystal Rings" protruding from its walls

The Water Mirror is a 1st water reservoir and a mirror

All the physical signs inside the space show and confirm that there was water in it. Does it help the system to have water so deep under the pyramid? And then I saw the bottom water mirror reflecting the energy up; Water is a bottom mirror for the machine!

They emptied this space under the pyramid to act as a water reservoir and in the same time as a bottom water mirror, to reflect life energy dispersed downward from its center of gravity or the Energy Pump back upward in the pyramid. Without this mirror the energy collected, in the pyramid above will be lost directly in the earth underneath it.



88. The Water Mirror - Partially filled with water (Mirror On)

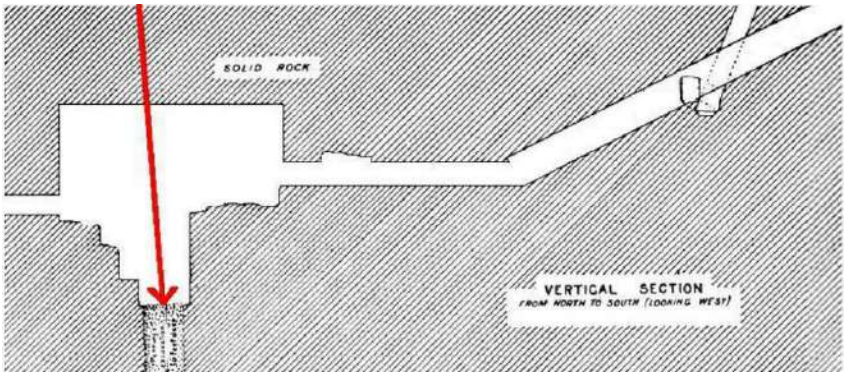
The Water Mirror had water in it at some point in its life, for sure during the time when the machine was functioning.

The shape of the water surface is decisive on how the beam of energy going down from the center of the pyramid above it will reflect and pass through it. Coming from an optically less dense medium (air) and entering a denser one (water), the energy beam is partly reflected back while partly entering the water.

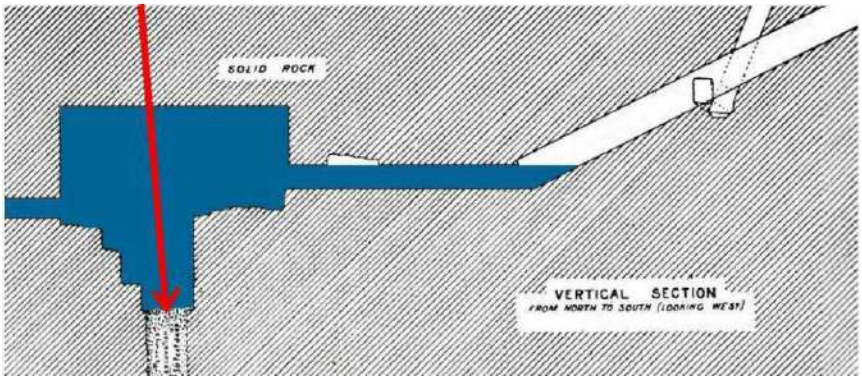
Depending on the shape of the water, the energy reflected forms crinkle patterns or becomes diffused randomly in all directions. The amount of

energy that is reflected upward depends strongly on the height of the source and the surface shape of the water.

Wavy water absorbs and scatters more energy whereas calm mirror like water reflects more. In addition, if there is water vapor in the space, it will affect energy absorption, reflection and scattering characteristics.



89. The Water Mirror - Empty of water (Mirror Off)



90. The Water Mirror - Filled with water (Mirror Off)

Above are two examples of turning off the bottom mirror and the machine by allowing the energy beam to go deep in the earth. The On-Off switch is controlled by the water level inside this space.

But why this space is not finished? May be because it fulfilled its function in the state it is in. It dehydrate and dissociate water to supply the system with

fuel.

The focused life energy beam aiming down at the pyramid center in addition to the energy contained between its two mirrors caused this deep hole in the floor from the point of contact with the ground while reflecting and some are entering the ground.

The Water Mirror is an energy absorber

Since the Water Mirror space is allowing the energy rich Nile River water to reach it and be in it, and there is a high-energy beam between the top Capstone Mirror and the bottom Water Mirrors, this beam absorbs the energy from the water to increase its potential.

The Water Mirror is a 1st water dehydrator and dissociator

The most obvious effect of the energy collected in the pyramid space and the energy beam contained between the two mirrors is its strong dehydration effect, or the removal of water.
How can water be removed from water using Life Energy?

It is a water phase change, from its liquid phase to its gaseous phase.

First the water molecules absorb life energy and start its transition from a more associated liquid phase of water, to a less associated gas phase of water (water vapor or steam) which rises up above water.

If the energy beam is strong enough it will dissociate water to its gases, hydrogen and oxygen and they will also rise up above water.

In a balanced state of water, its gaseous phase steam and its dissociated gases, hydrogen & oxygen, inside a closed space: hydrogen is the lightest in weight, and will always be on top followed by the oxygen, while underneath them is the heavier steam or water vapor but it is still a gaseous state of water and

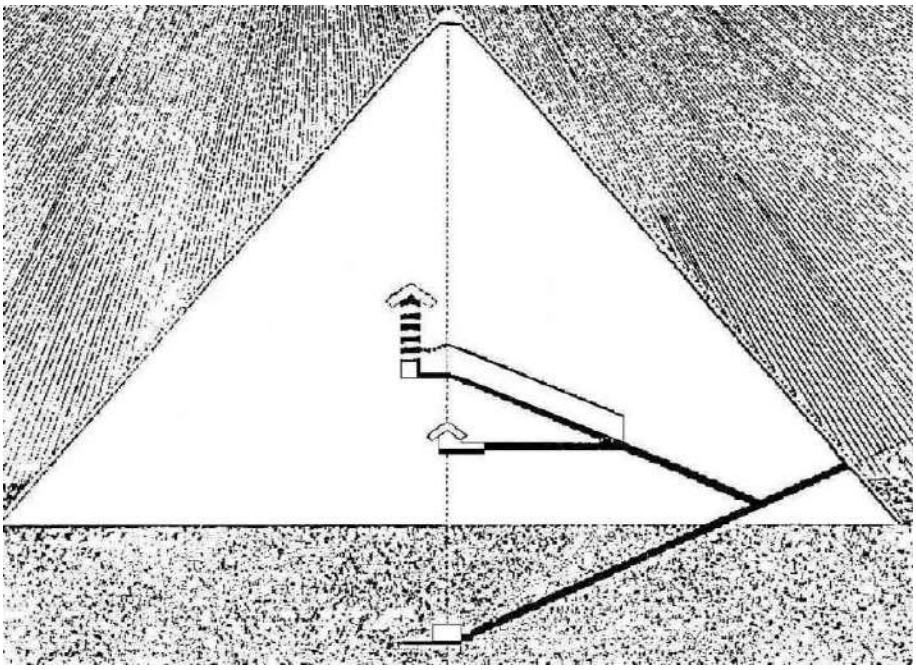
will rises up above water.

Once formed, this mixture of the gaseous water and its atoms rises in the Water Mirror space to fill it, then flows out of it to the horizontal level of the Lower Pipe, and since the hydrogen is the lightest it stays on top with the oxygen and steam underneath it. They continuo their movement upward in the 26 degree angled Lower pipe.

The precision of the Water Mirror Location under the center of the pyramid is very important to the function of the system. Either to dehydrate & dissociate water, in addition to reflecting the energy back up inside the pyramid from the water surface, or to pass the energy to the earth.

5) The Lower & Upper Pipes

To really build the Great Pyramid System with the components above each other with such precision requires the Lower & the Upper Pipes. These two pipes are a mirror image to each other.



91. Aligning the Great Pyramid components

Systems Aligners:

A sun reflector is used to align the Lower Pipe by aiming it down 26 degrees and measuring the horizontal distance to the Water Mirror.

Then by placing a second reflector at the connection of the Lower and the Upper Pipes, and used to align the Upper Pipe by aiming it up 26 degrees and measuring the horizontal distance to the Center Platform, GST Exit Valve and the Energy Pump.

Using some geometry and angles, HG and its pipe could also be aligned and it becomes an accomplished task to align all system components so precisely inline and above each other.

Primary gases separation pipes:

The Lower & Upper Pipes function as the primary gaseous water and its atoms separation tower. Its combined functional total length is 412 feet (125 meters) long, with height of 4 feet (1.2 meters) and breadth of 3-1/2 feet (1.05 meters).

By assuming that the northern top end of the lower pipe on the northern face of the Great Pyramid is closed.

As mentioned earlier, Life energy in the Water Mirror turned water into its gaseous form and it increases in volume by 1,600 times at standard temperature and pressure.

This gaseous mixture expands and flows upward above each other, the hydrogen rises fast to the top end of the Lower Pipe to fill it then deviate upwards in the Upper Pipe and stand by the entrance to GST Inlet valve, while the oxygen is behind it.

As for the steam (water vapor), it is always under them. The steam starts to condense as water droplets on the cooler upper walls and ceiling of the Lower Pipe and eventually flows down to the floor and form a water stream towards the bottom horizontal pipe and to the water mirror again.

This water condensation down the Lower pipe dissolved a deep groove on the center of the floor of the pipe with a depth of 10 inches (25 cm), starting from the bottom up to a certain height. Earlier photographs before installing the wooden floor boards confirms the water wear effect.

The steam that is formed, always stays underneath the gaseous water atoms,

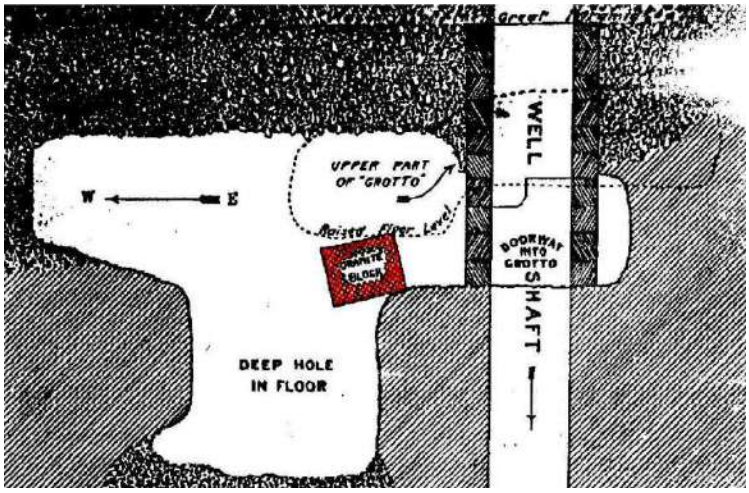
on the bottom portion of the Lower pipe, and it finds an escape rout through the Lower Pipe side outlet to the bottom Grotto pipe and up towards the granite Grotto Valve.

6) The Grotto Valve and its pipe

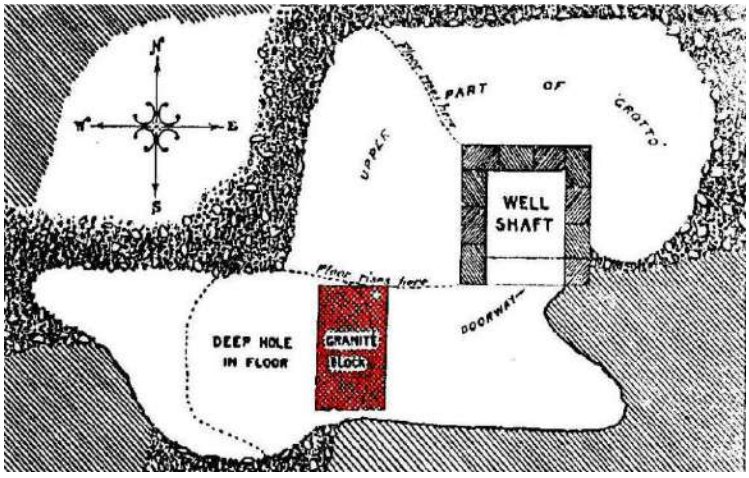
The Grotto Valve and its pipe is an original component of the machine, and it is the steam (water vapor) rout to enter the Hydrogen Generator – HG:

1) From the Grotto upward, the pipe is built with stones around it.

2) The Grotto Valve pipe is carefully constructed at its top connection with the Upper Pipe, GST and HG pipe.



92. The Grotto Valve and its pipe - vertical section - looking north with the granite block - in red



93. The Grotto Valve and its pipe - ground plan with the granite block - in red

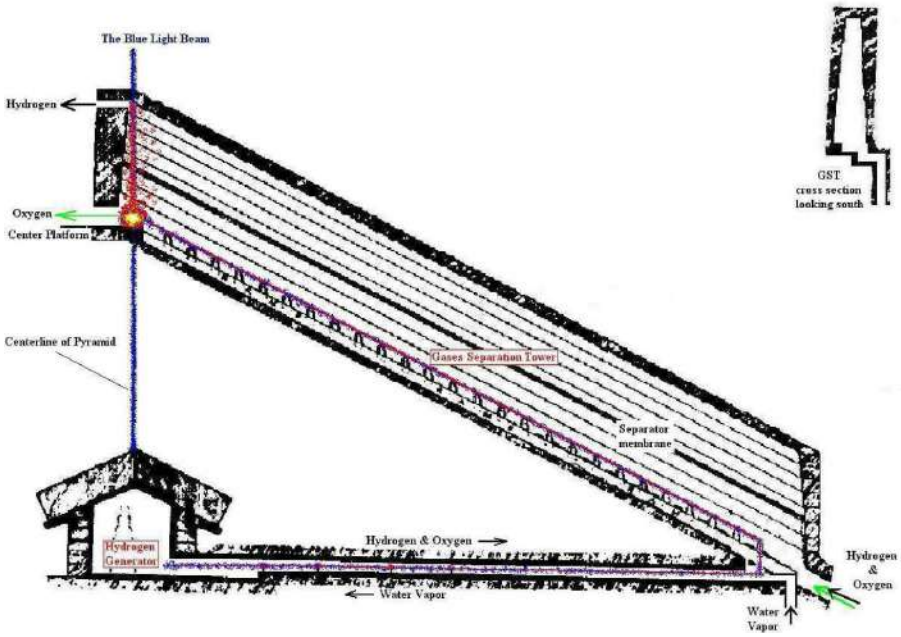
3) The Grotto space contains a granite block that is smooth in its six sides with a hole passing through it, this block cannot pass to the Grotto from above or from below, it was placed in the Grotto space before even the pyramid blocks were placed above it. This granite block fits perfectly between the pipe walls at the Grotto level and act as a one way steam (water vapor) valve, to supply the steam (water Vapor) to the Hydrogen Generator - HG.

94. The Grotto Valve pipe bottom end, looking upward from the bottom near the Lower Pipe

4) The Grotto bottom pipe connection with the Lower Pipe is carefully executed for a special purpose, to allow the steam formed in the Water Mirror and now rising in the angled Lower Pipe underneath the hydrogen & oxygen and above any water condensation to flows to the bottom of the pipe and up to the granite Grotto Valve.

95. The Grotto Valve pipe top end cover at GST north west corner

7) The Hydrogen Generator - HG



96. The Hydrogen Generator – HG & the Gases Separation Tower – GST notice the energy lines and their holders in purple

The Hydrogen Generator - HG and its pipe are located on the 25th course of masonry of the Great Pyramid.

Both have all the remaining signs of water in them (even that they are dry now) and here are some of their features:

1) The whole length of the pipe is slanted 1 degree towards the HG to allow any water to flow towards it.

2) The last 1/7th of the floor of the pipe drops twenty-one inches to form a **2nd water reservoir** with the HG that can holds up to 20 tons of water.

3) The floor of HG is very worn and uneven.

97. HG - West-North-East walls

98. HG - East-South walls

99. HG - North valve opening

100. HG - South valve opening

4) The saline incrustation, going from north to south in the pipe, are observable on its walls and floor beginning from about 1/7th of the pipe's total length. The saline encrustations are increasing in amount farther southward; until at the last 1/7th of the pipe and the HG, their roofs, walls and floors were covered with a coating of saline incrustation near an inch thick, brown outside, white inside and of stony hardness.

5) All the water signs inside HG and its pipe confirm water dehydration (evaporation) that left all that salt behind.

6) The chemical analysis of the HG walls material is 5% salt.

7) The presence of north and south closed pipes entrances. These two pipe entrances were completely closed, 5 inches before they enter HG. They were both still intact until Waynman Dixon broke their walls in the year 1872.

8) There is a recess in its eastern wall the "Niche" which is over 15 feet high, 5 feet wide at the base, and a little less than 3.5 feet deep in the wall.

9) There are four holes in the floor of HG pipe, that were for four supports to carry an energy line down from GST. These four supports are to prevent the energy from flowing to the ground. This energy line extends through the whole length of HG pipe near its higher top to dehydrate & dissociate the gaseous mixture formed in Hg before it reaches the GST.

In so many trips inside the Great Pyramid, I stayed in this space for a long time, looking and contemplating…

What is "The Niche" for? I really tried to find an answer to this question; it is one of the missing parts that will be known from its function through experimentation.

I tried everything in the Niche, quartz crystal in Model 2, ruby crystal in Model 3, and then the water-activated battery was implemented for many models after that. What came good out of this battery is the discovery that it dissociated water to hydrogen and oxygen using less electricity, 0.5-0.7 volts DC to do the function of 1.23-1.48 volts.

You mean we can use less electricity if supplemented with this free renewable energy? We can use this machine in our homes?

HG is a 2nd water dehydrator and dissociator

From all the salt Signs in the space one must confirm that there was water dehydration (evaporation), and since the space is in the route of the energy beam between the two mirrors, the high energy will cause water dissociation.

HG has two overpressure relief valves

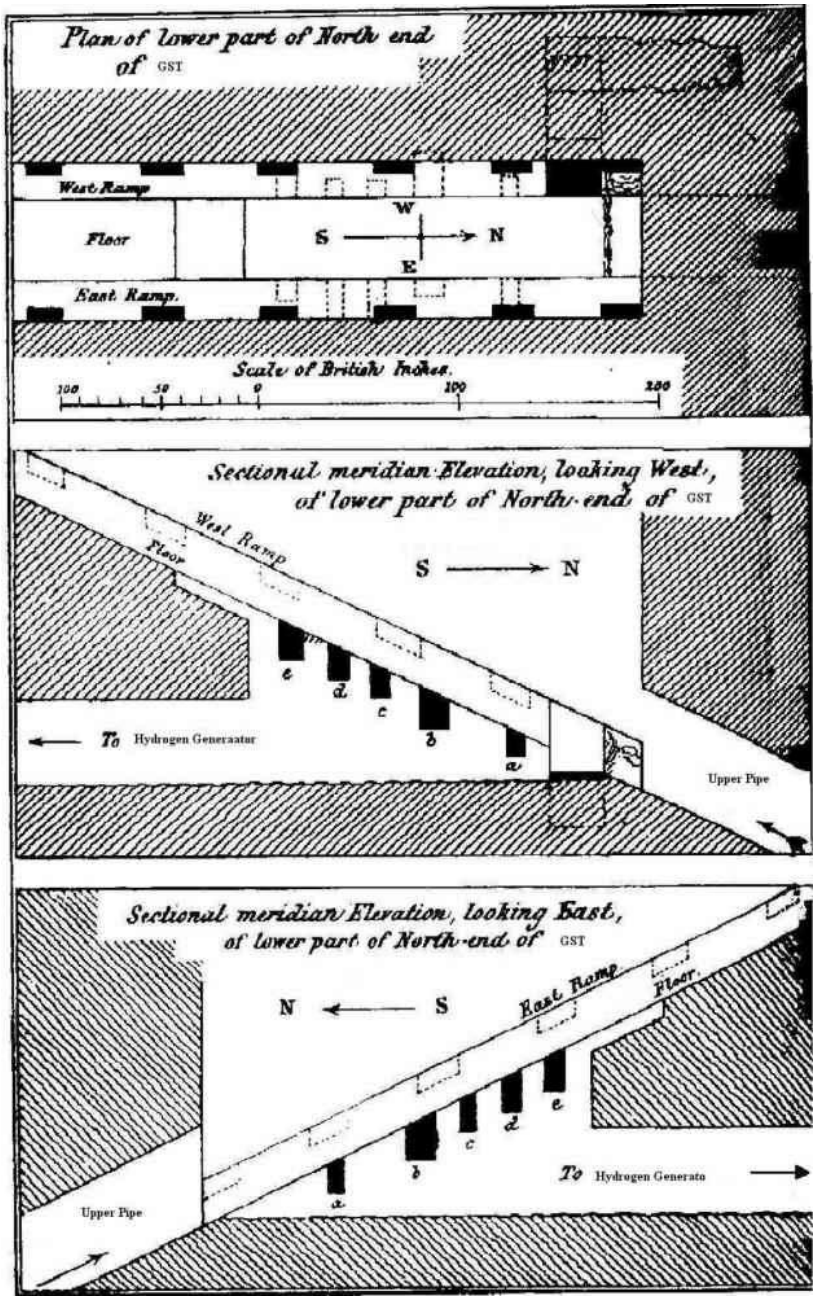
Due to the presence of the two closed pipes and their multi door system along their lengths, it suggests that they act as multistage overpressure relief valves to protect the HG space from collapsing in case of extreme steam and gases

pressure built up.

8) The Gases Separation Tower – GST Inlet Valves

101. Northern end of GST and the Upper Pipe, notice the remaining signs of salt and water

102. Northern end of GST and the Upper Pipe, showing the holes on both sides of the walls entrance to HG pipe, supporting a missing multi-pieces hydrogen, oxygen & steam valves



103. The hydrogen, oxygen & steam multi-pieces valves remaining details in the northern end of GST, showing its pieces support holes (black boxes a, b, c, d & e) on both sides of HG pipe beginning in GST, notice the depression in GST center floor. Also notice the shaded outlet of the Grotto top pipe (top

diagram)

The Gases Separation Tower – GST Inlet valves are located at the bottom part of the North end of GST. It is made of many pieces that are all missing now.

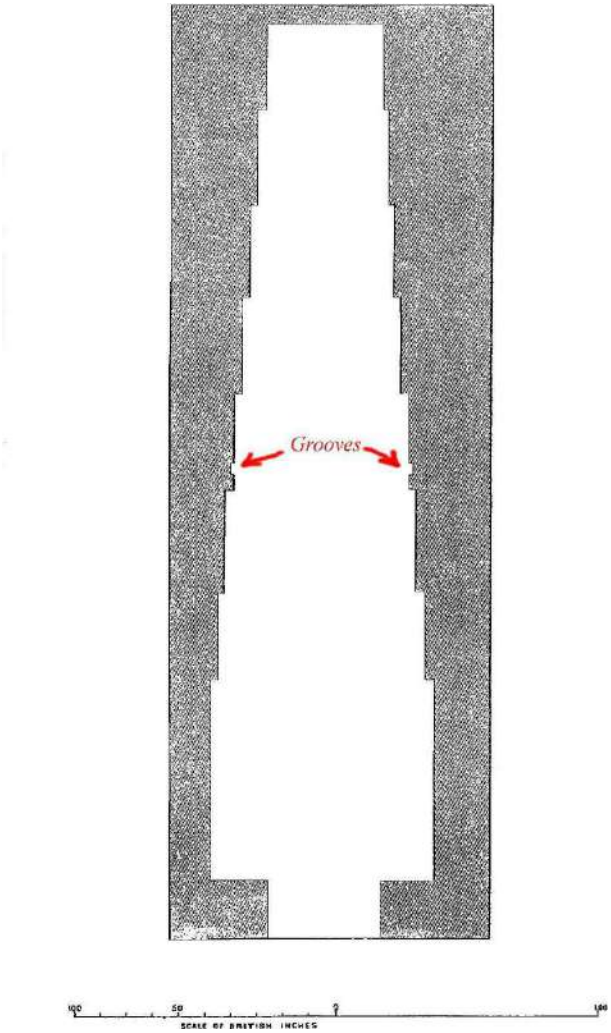
The Grotto pipe top outlet: For the steam produced in the bottom Water Mirror and after being separated from the hydrogen & oxygen gases in the horizontal and lower portion of the Lower Pipe. This steam will open the granite Grotto Valve and continuo upward in its top pipe. It runs on the bottom of HG pipe to supply HG (2^{nd} water boiler) with steam.

The hydrogen Generator exit valve: For the hydrogen & oxygen gases produced in HG and its pipe. These two gases will enter GST space.

The Upper Pipe hydrogen valve: For the hydrogen & oxygen gases produced in the bottom Water Mirror and separated from steam, using the 412 feet (125 meters) long Lower & Upper pipes. These two gases will enter GST space.

9) The Gases Separation Tower – GST

The Gases Separation Tower - GST measures 156 feet (47 meters) long and 28 feet (8.6 meters) high, with five connections to all components.



104. The Gases Separation Tower – GST vertical section, west-east looking south

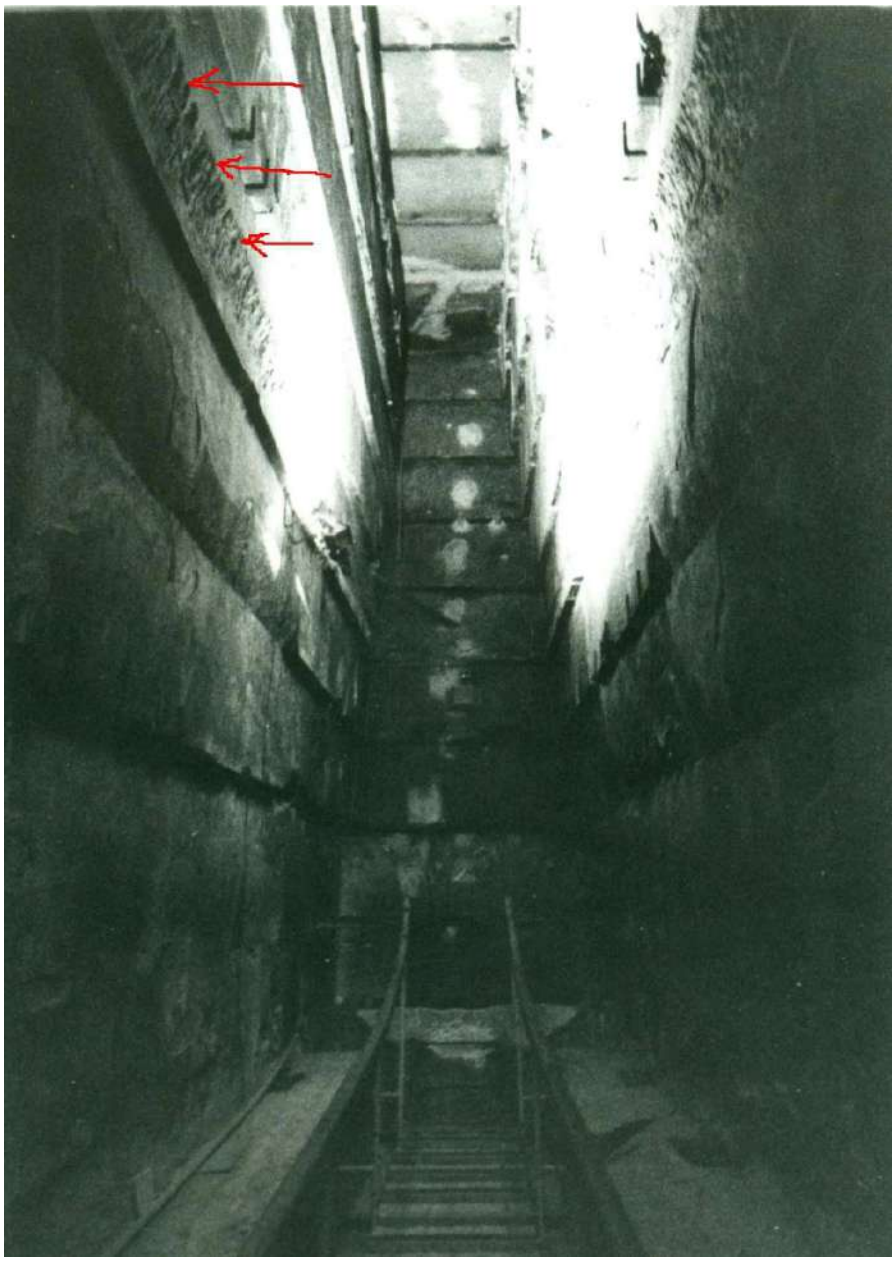
What is GST used for? Why does it have these ramps with fifty holes and matching wall outlets stone structures? Why is there a groove that extends on

both sides for its whole length?

Why, why and more why’s when it comes to this pressure bottle.

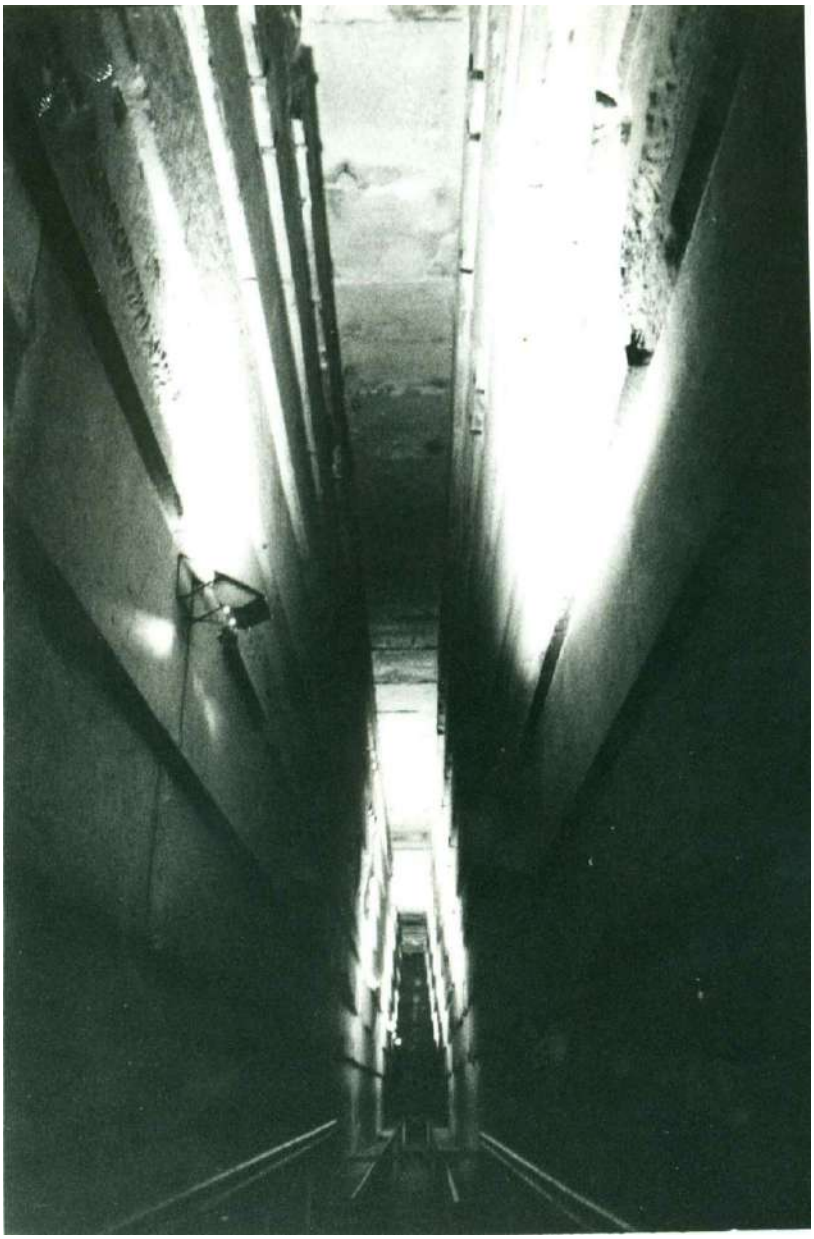
GST has a Separator Membrane groove for gases separation

A mysterious but little known feature within GST is a pair of grooves measuring 6-inches in height and 3/4-inch (19 mm) deep These grooves, one on each side divide GS into two halves.



105. GST top portion – looking south, showing the eastern groove and wall marks above it, notice the Center Platform deep wear that required a large white patch for its repair

Whatever this false ceiling was, it could not be so heavy or it would have broken these delicate grooves. These two grooves are running along the fourth overlapping section of its corbelled walls and for the whole length of GST.



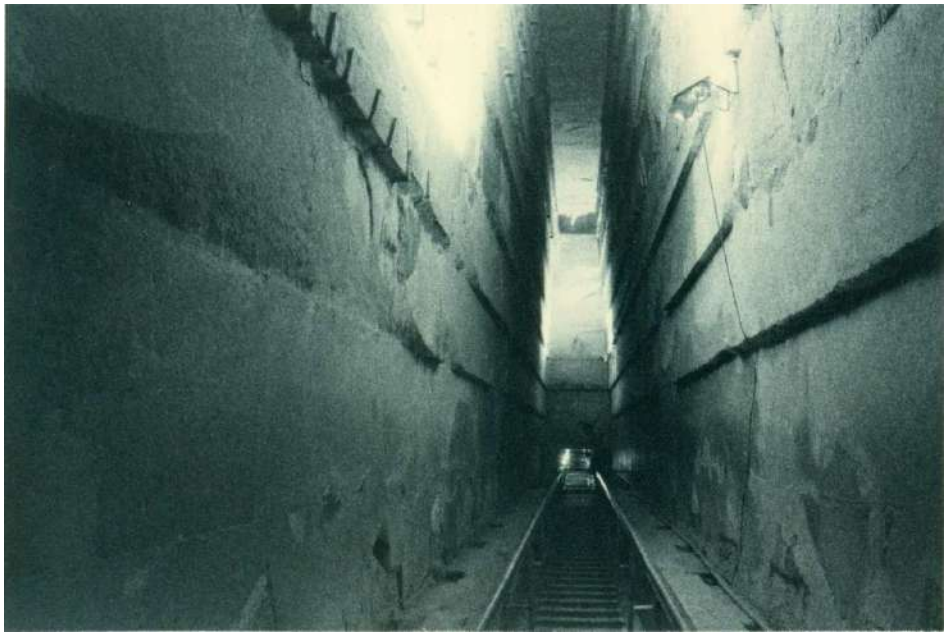
106. GST middle portion showing the groove on both sides with their top broken walls

There was something installed in these grooves and covering the whole length and width of GST.

This false ceiling was forcefully removed out of its place. The entire top wall above these grooves with a height of several inches is very rough and scratched from the disassembly process.

Any material that allows the light hydrogen gas to pass through it to the higher level of the GST, while keeping the heavier oxygen gas and water vapor in the bottom part underneath it, will work just fine. In GST models I used a hydrogen / oxygen separator membranes.

GST Ramp Holes and its missing Energy Lines Holders

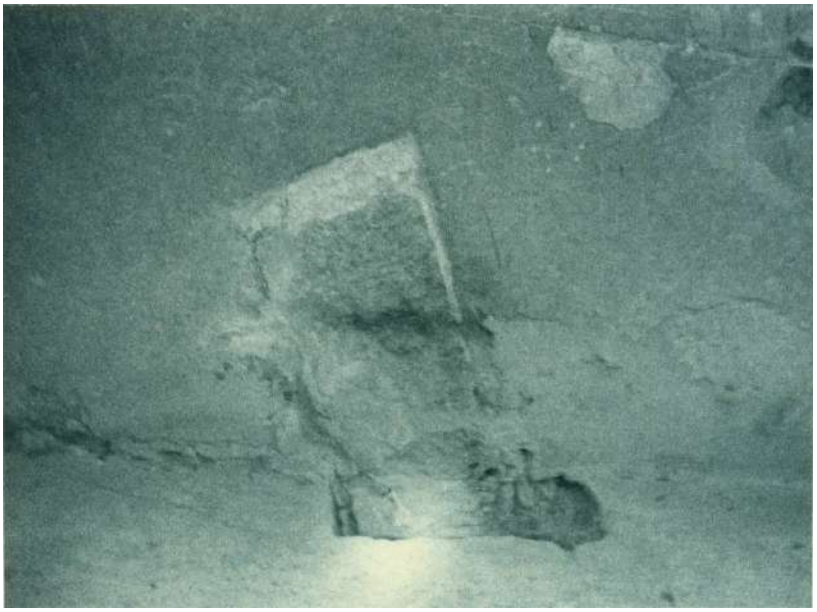


107. The ramp holes on both sides of GST

GST has 25 complete hole / holder system asymmetrical in distance between each other, on each side of its ramps for a total of 50. In addition to 3 more incomplete systems on each side, 2 on the north end and 1 on the southern corner of the Center Platform.

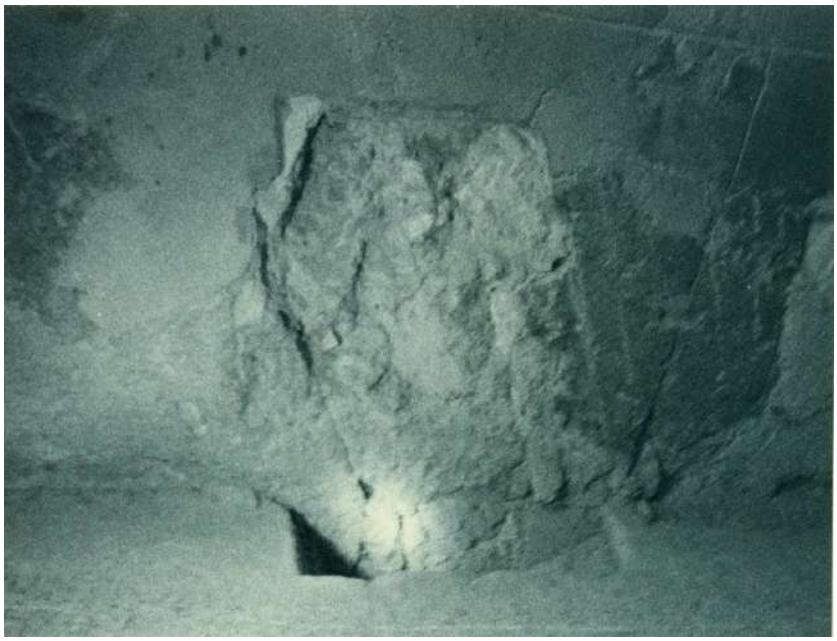
What is very interesting is the wall beside each ramp hole which had a vertical rectangular hole where a structure used to fit in it, and also this structure design incorporate a lid spaced an inch or so (2.5 cm) to cover the ramp hole with the ramp’s same angle.

108. Western 7th Ramp hole, from the north end of GST, showing the Only (out of 50) vertical structure hole clean of any remnants, notice the slanted top to allow for this structure to be placed in the ramp hole first and then to the back wall hole. After placement, it would be cemented in place with mortar



109. Western 12th Ramp hole, from the north end of GST, showing the top

mortar in a lighter different color

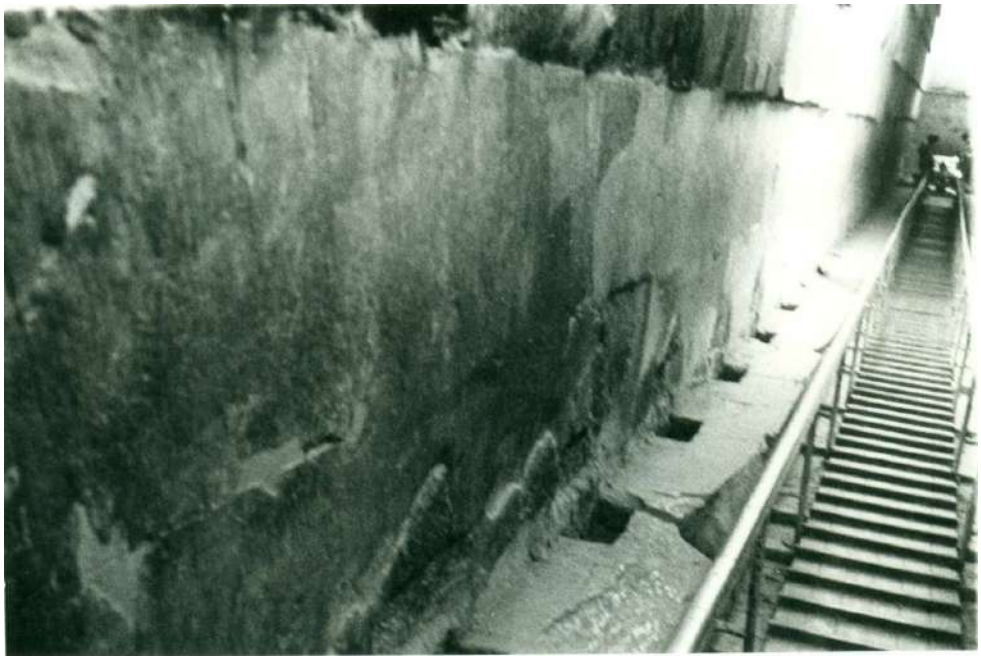


110. Western 9th Ramp hole, from the north end of GST, showing the ramp hole and its wall structure remnants

111. Eastern 16th Ramp, from the north end of GST

I used these holes to hold a little water (3 drops in each) and the wall

structure to hold gold plated silver electrodes. A water activated battery in HG was used to supply electricity to these electrodes to do water dissociation.



112. The Ramp holes in GST

GST is a 3rd water dehydrator & dissociator

This GST is a vacant space inside the solid pyramid, which will deposit inside that space, all the amplified energy passing through its material. In addition, due to the presence of very high energy beam through the Center Platform area that supports the presence of a connecting energy line (diagram 96). These energy lines are being held with 50 holders on both sides of GST ramps, to prevent the energy from flowing to the ground. Any water vapor present in the GST bottom space will condenses on its walls to settle in its ramp holes. The energy lines passing there will dehydrate & dissociate this water.

10) Pure Hydrogen to the Energy Pump

At the GST top termination at the south end, is the hydrogen inlet to the Energy Pump.

While at the bottom is a horizontal “Center Platform” measuring 6 x 8 feet (1.8 x 2.4 meters) and 3 feet (91 cm) high.

The Center Platform is located on the 50th course of masonry of the Great Pyramid, centrally in line with HG, the Capstone Mirror and the Water Mirror.

The Center Platform is also in the center between the Capstone Mirror and the Water Mirror. The energy beam passing between the two mirrors wore and broke the Center Platform in half that it required large repair to level it back (photo 105). Also the energy melted the limestone walls beside it and in many batches like molten wax.

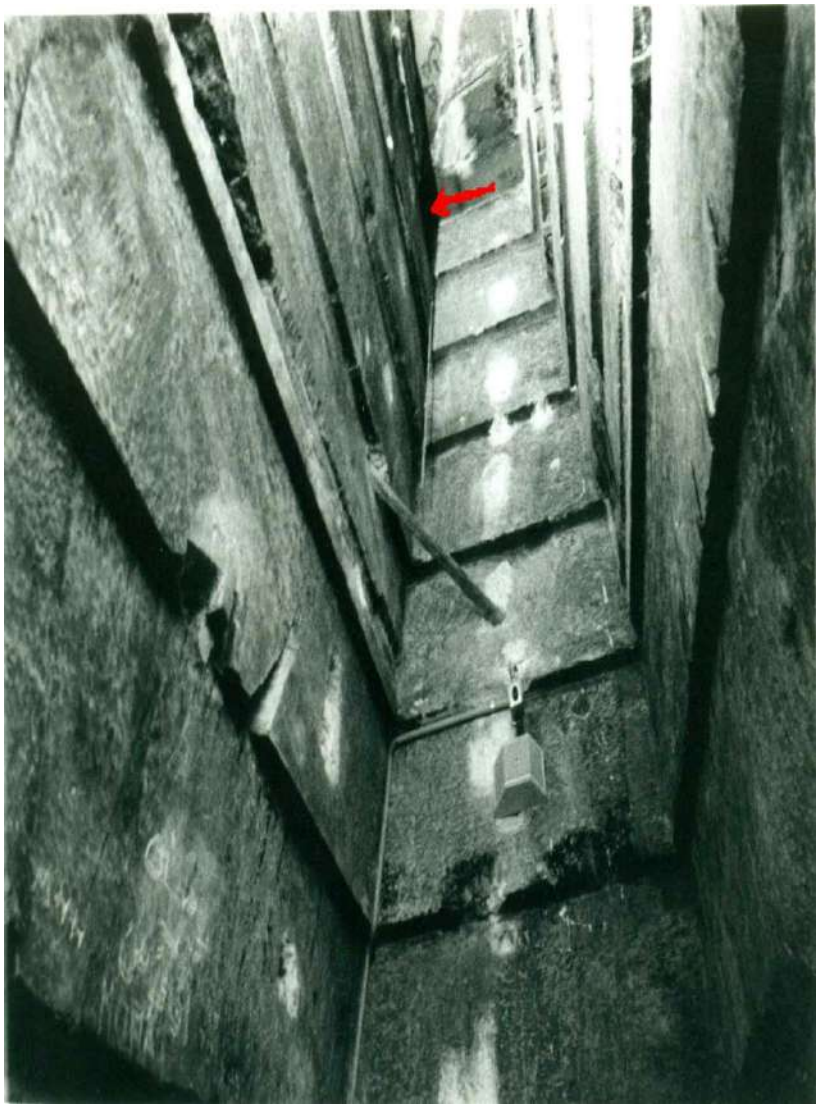
Earlier photographs before repairing the Center Platform confirms the magnitude wear effect from the energy beam.

The wear on the Center platform is exactly in line and above the pit hole in the Water Mirror.

All the hydrogen gas is being purified in GST to enter the top part of the Energy Pump, but why?

When the Energy Pump is pressurized with pure hydrogen its output increases many folds in generating Life Energy.

Pure Hydrogen Inlet

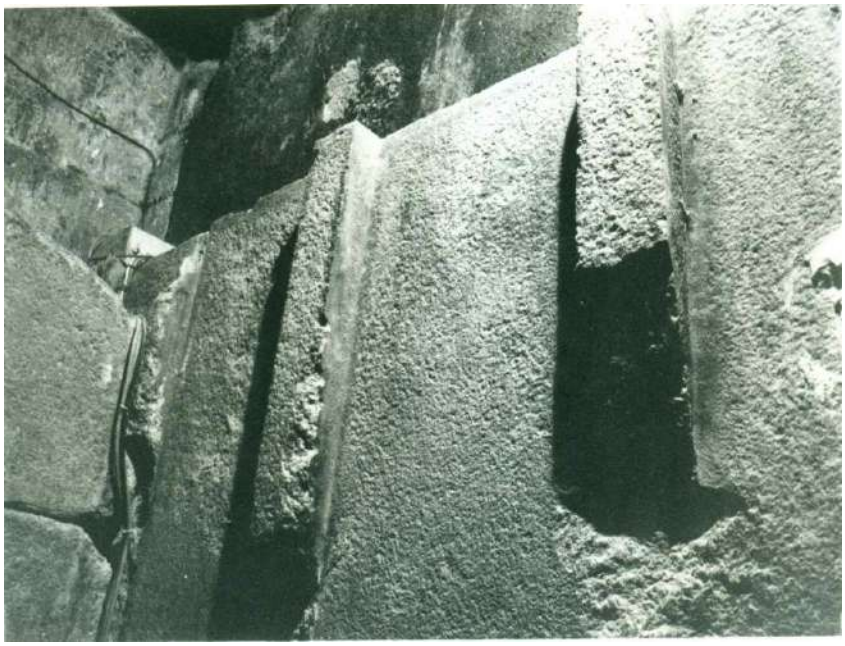


113. Top east south corner of GST, showing the inlet of pure hydrogen supplying the Energy Pump

11) The Gases Separation Tower – GST Exit Valves

This granite Exit Valves is a little space between GST and the Energy Pump, and It controls the movement and the removal of gases from GST.

These valves are balanced so that they release GST pressure to the Energy Pump inner space once it reached a certain pressure. Also the suction from the Venturi effect inside the granite Energy Pump could open it once it reaches a certain suction power, (more photos 17 & 18).



114. The granite Gases Separation Tower – GST Exit Valves showing the eastern granite slab's tracks for its valves system

12) The Top Capstone Mirror

I must assume the existence of a top mirror platform on top of the Great Pyramid. Or, it could be an underside-mirrored capstone. In both cases the mirrored side is aiming down, back inside the pyramid/

Without it, the system would still function but there would be a lot of energy loss through the top of the pyramid instead of the energy being reflected back inside the system and contained between the mirrors to do more amplification passing through the pyramid material.

What could this mirror be made of? Anything that reflects light will reflect the energy, anything shiny: maybe polished copper or even a precious gold reflector base for this capstone would work just fine in reflecting the energy back towards the bottom mirror to be contained between them.

Conclusion

The Pyramid System generates **The Blue Light** that acts like our electricity and saves it. This means we can use less electricity for now, until we develop the methods to use **The Blue Light** instead of electricity.

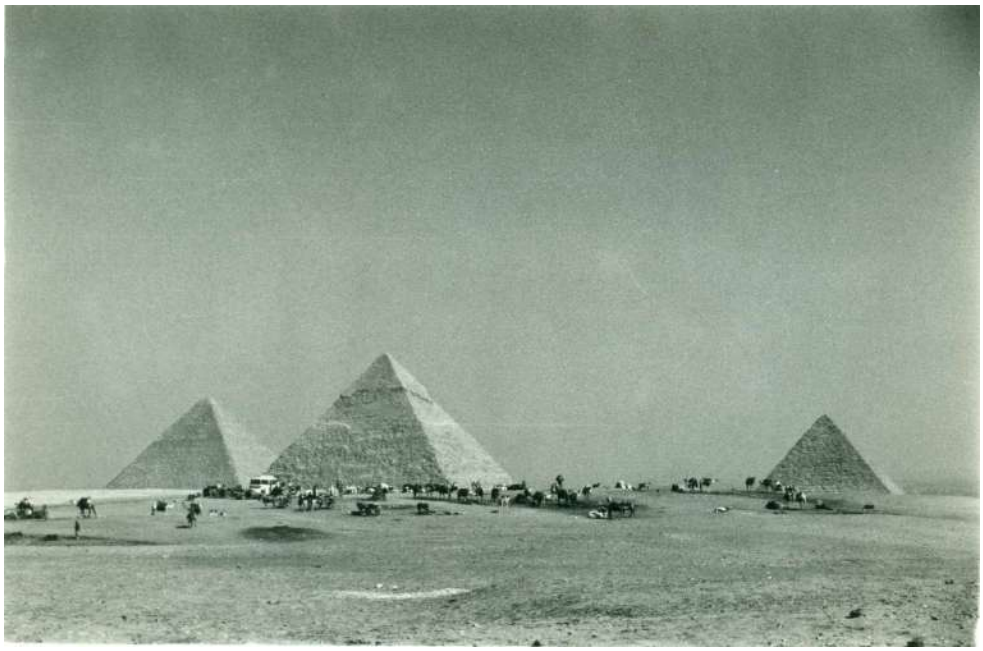
The Pyramid System generates **The Blue Light** that causes antigravity. And when putting a special miniature Pyramid System in the car it saves up to 25% of the fuel.

The Pyramid System generates **The Blue Light** that dissociates water to hydrogen and oxygen gases. Using hydrogen and oxygen gases give us usable power, heat and ultra-pure fresh water. Combining hydrogen and oxygen gases in a fuel cell will give us free electricity and ultra-pure fresh water.

This means by utilizing this new technology our oceans and seas become available to us as ultra-pure fresh water source and the world has a clean renewable source of free electricity and power.

CHAPTER 6

WHY THE THREE PYRAMIDS



115. The Three Pyramids of Giza, Egypt

“The Great Pyramid of Giza, Egypt is a system to generate Life Energy and the two smaller pyramids beside it increase its output”

From this research in hand it is evident that the Great Pyramid was a giant machine that collected and amplified a massive amount of Life Energy to be used while contained or after being projected outside the machine.

The 2nd and the 3rd Pyramids are:

1) Simple pyramids with no internal complicated components high above the ground

2) Built with the same precision, angles and large blocks

3) No Hieroglyphs writing in or on them

4) No mummies found ever in them

5) Their northern face is aligned to magnetic north

6) Have outer cladding or covering stones

7) Have a centrally located room just underneath them

8) Have water channels underneath them to support the presence of their bottom Water Mirrors to reflect the energy back inside them

9) Both of them will attract and collect Life Energy from the atmosphere, but the Great Pyramid with its higher potential energy will attract their energies to increase its output

From the previous points, the three pyramids are one large system for Life Energy collection & amplification

Disassembling the Great Pyramid System

There are so many parts missing from all components of this machine that one must assume and almost confirm, that it was taken out on purpose and disassembled by the original builder or the followers, to render it useless towards the purpose it was intended to, which is generating Life Energy.

The major points of disassembly of the Great Pyramid System:

1) Top Capstone Mirror **Missing**

2) Turn Off the bottom Water Mirror, by closing its water supply to dry it out

3) From last point, by closing the water supply to the Water Mirror means there is no hydrogen fuel

4) Seal the Upper Pipe with the granite plug stones

5) Seal the Grotto Valve pipes with rubble and rocks

6) Take the granite block in the Grotto Valve out of its place

7) HG pipe's four floor stands **Missing**

8) HG pipe Energy Lines **Missing**

9) HG - Niche object **Missing**

10) GST Inlet Valves **Missing**

11) GST 50+ ramp holders **Missing**

12) GST Energy Lines **Missing**

13) GST-Center Platform 2 corner Energy Lines ends **Missing**

14) GST separator membrane **Missing**

15) GST Exit Valves **Missing**

16) Internal Venturi parts from the Energy Pump **Missing**

17) Internal parts associated with the Energy Pump granite box, for example its cover…etc. **Missing**

18) **Why are the granite Energy Pump two ceiling blocks broken?** Many possibilities can cause that:

a. Natural catastrophic earthquake

b. High hydrogen pressure above them

c. Strong Venturi suction underneath them

d. In disassembly to STOP the machine: By allowing the hydrogen produced and contained in its top condenser spaces to escape out of the system, by flowing through its Venturi outlet and its Southern Air Pipe.

116. The two broken granite blocks in the Energy Pump ceiling

Mysterious Techniques

117. Granite block near the original entrance to the Great Pyramid, notice the vertical wall with hole marks

118. Details of the drilled holes in the granite block

119. The granite block showing the hole precision cut - close up

The dimensions of this granite block near the original entrance to the Great

Pyramid are 4 x 2 x 1.6 feet (1.2 x 0.82 x 0.52 meters).

This block has 3 perfectly drilled, 3 inches (7.5cm) in diameter holes, these holes are drilled through the tough granite, with its 7 hardness quartz crystals, like it was nothing.

What were the mysterious energy and techniques used to cut and drill this hard granite block?

The energy is Life Energy or **The Blue Light** and the technique used is a focused beam of this energy, the same energy causing dissociation of water inside the machine.

Consciousness is Life Force

Chapter 7

Using Consciousness over Matter

What is consciousness?
What does it mean to be totally consciousness?

First I want to explain our so-called conscious mind - our everyday mind - our thinking mind, which helps us in our waking state.

Thinking means: Our mind works like a machine works, both make noise and we can measure them. Our mind has logic, ideas, it counts, has memories, imaginations and plans…
Our minds can do many processes and it chatters inside us the whole day. But…who is the one who follows the chat? Who follows is not our thinking mind, who follows is the **ME**.
When I lose myself and identify with the thinking mind,
I lose the **ME** in the thinking processes and think that this thinking is **ME**.

Now again from the beginning:
People are calling this mind the conscious mind – but it cannot be conscious of the **ME**. The thinking mind doesn't have the mechanism to be conscious of the **ME**. It can only do thinking processes, because **Consciousness** or **Awareness of Self** is beyond mind. It is something else or something different than thinking.

This means:
When I think, I am lost in thoughts and become unaware or unconscious of the **ME,** I call it the unconscious mind or call it the thinking mind.
So...the everyday thinking mind has nothing to do with **Being Conscious.**

This mind machine doesn't even know what **Consciousness** is.

Consciousness is the other pole of thinking. It is pure mind… empty of thoughts; this pure mind has **"The Consciousness"**.

The Tibetan Buddhist call it the **Natural Mind** or the **Pure Mind** (In Tibetan language they call it RIGPA).

This means that **Pure Mind is Conscious** and thinking mind is unconscious.

The thinking mind uses a lot of energy for its processes and it goes on and on and never stops thinking even in sleep.
The **Essence Natural Pure Mind** ***needs not uses*** but needs a ***huge*** amount of energy to function as **Consciousness** but the thinking mind has already used all the energy, so it doesn't function.

Monks, Yogis, Sufis, Priests and others, what are they doing all their life?
They accumulate energy for the **Pure Mind** to function and this functioning of the **Pure Mind** is called **Consciousness**.
It is **Awareness with no content** (no thinking process), but aware or conscious ***of what***? Aware and conscious of **PURE BEING**.

Pure Mind has a system. The more energy it accumulates the more conscious it becomes.
So a student is not like a teacher
And a monk is not like a master
The difference is the ***amount*** of their energy.

A master is full of energy; knows the ways of not spending energy and how to accumulate energy more and more until it overflows.
This Awareness or Consciousness is PURE COSMIC ENERGY.
Many things can be done with this **PURE COSMIC ENERGY** like healing, telepathy, clairvoyance and even walking on water or fire. With the feeling of the fullness of this energy, one lives in ecstasy as a byproduct.
PURE COSMIC ENERGY IS Life Energy

Consciousness is accumulated energy **"*until it becomes conscious of itself*"**. In this state, one is **Pure Energy** with ***no I*** in it, one becomes **ONE** with **COSMIC ENERGY**.
First you were a drop alone, now you become **ONE** with the ocean itself. To become **ONE WITH ALL** is the **Highest State of Consciousness,** full of energy or call it full of life electricity or **LIFE FORCE, this is …The Blue Light**

Some Tibetan monks and Sufis vanish themselves into light for sometime, the body vanishes and there is only light, after a while they come back, therefore they call this the **LUMINOUS MIND.**

Now back again to our Pyramid Machine, this machine collects and amplifies **PURE COSMIC ENERGY** or **Life Energy**.
When added to electricity, it saves it. How much saving depends on the machine kind and size. It is not exactly the same energy like electricity, it is **Life Energy…The Blue Light**

With this **Life Energy** in use, antigravity, cutting like a Laser beam, sending thoughts or flying in the air and more can be done.

In my next book I will explain precisely how we as human beings can use **Life Energy** from this Pyramid Machine with **our Consciousness** to direct it wherever we want to accomplish what the thinking mind cannot accomplish, like lifting huge blocks without effort.

They call it Miracles

I call it Consciousness over Matter or LIFE FORCE over ALL

“This is the beginning of a path, to a new clean renewable ancient source of energy, for our future”

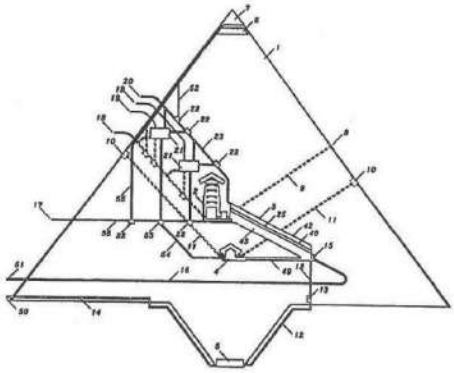
(54) Title: PYRAMIDAL MACHINE



(57) Abstract

An energy conversion machine (1) having a pyramidal shape (7) is disclosed. Wind and water energy is utilized by the conversion machine (1) for water desalination and purification, heating, cooling or as an underwater life support system. The pyramidal machine (1) does not cause audio or noise pollution, air pollution or in effect, the environment.

Above Abstract had been changed from the original by PCT and the United States Patent Office and does not reflect the machine and its benefits The original Abstract before change (like in the Egyptian Patent Office) is "Pyramidal shape machine produces electrical energy. Hydrogen & Oxygen gases and also used for desalination, heating, cooling and for breathing under water
No fuel needed, noiseless, with no moving parts or pollution to the air or environment"

THE DESCRIPTION

Title of the invention: PYRAMIDAL MACHINE

1.Technical Fields:
The field of electrical energy production.
The field of water desalination and purification.
The field of heating.
The field of cooling.
The field of Hydrogen gas production.
The field of Oxygen gas production.
The field of life support system for underwater usage and habitat.

2. Background Art:
No previous background art.

3. Disclosure of Invention:

The Pyramidal Machine is a multipurpose apparatus, and composes of the pyramidal shape (1) which contains the machine elements and parts, and the unique pyramidal shape is a part that is important for the machine.
The Pyramidal Machine contains an amount of water, that once reached the subsidiary water dissociation reservoir and the water activated battery chamber (4) will produce an amount of electricity using Zinc/ Copper water activated battery (47 & 48) for example, and the electricity produced will be used after its application is amplified using the pyramidal shape and parts system like the suction and concentration chamber (2),

The main water reservoir chamber (5) and the top air chamber (6) with their locations inside the pyramidal shape and to each other in dissociation of water in the water dissociation and gas separator (3) tower cells (37),

The Hydrogen and Oxygen gases from water dissociation will be separated using a special membrane (25) for this purpose.

The produced gases can passed in fuel cells to produce electricity or to the Oxyhydrogen flame

pyramidion chamber (7) for heating, or cooling using a special cooling unit for that purpose. In both cases the water molecule is formed from its gases and it returns to the dissociation cells in the dissociation tower to repeat the cycle again.

By using the internal water cycle in an open system by introducing water through the main water entrance (50) we can have a continuous source of Hydrogen and Oxygen gases Separatly, the Oxygen gas can be used for life support system in underwater usage & habitat.

In addition the internal water cycle in an open system in the Pyramidal Machine could be used to desalinate and purify water, and in the Giant Pyramidal Stations to produce electricity and desalinate water where the wind power could also be used through its collection from the massive pyramidal concave surface that creates a lower pressure due to the venturi design of the northern and southern air inlet and outlets inside the suction and concentration chamber to pull the water from undemeth, the air also helps in the increase of the application amplification of the machine,

The Pyramidal Machine does not use any fuel or outside source of energy (except using wind in the Giant Pyramidal Machine to increase the overall energy production), The pyramidal machine causes no audio pollution or noise, in addition that it runs without any moving parts (only water moves inside of it) and causes no pollution to the air or the environment.

In brief the Pyramidal Machine is considered:

1. Pyramidal Machine for electrical energy production.

2. Pyramidal Machine for water desalination and purification.

3. Pyramidal Machine for heating.

4. Pyramidal Machine for cooling.

5. Pyramidal Machine for Hydrogen gas production.

6. Pyramidal Machine for Oxygen gas Production.

7. Pyramidal Machine for life support system for underwater usage and habitate.

These functions could be combined all or partially in the same machine or be separated.

4. Brief description of the drawings:

Sequence listing part of description:

Pyramidal Machine Parts List:

1. Square based pyramid

    - The sides will form an angle to the base of 52 degrees
    - Vertical height ratio to the base length is 2 : 3.14
    - Northern side of the base is perpendicular to the magnetic and geographic north pole
    - The northern face is made up of three triangles to form a concave with the ratio of 0.004 to the base length
    - The other three faces (western, eastern and southern) every one of them is made of two triangles to form a concave with the ratio of 0.004 to the base length
    - The pyramid shape could be hollow or solid (by filling it with fresh or salt water or lime stone or other materials)

2. Suction and concentration chamber located at 1/3 of the pyramid vertical height, from the bottom and made of red granite or other materials
3. Water dissocition and gas spearation tower
4. Subsidiary water dissociation reservoir and the water activated battery chamber
5. Main water reservoir chamber
6. Top air chamber
7. Oxyhydrogen flame pyramidion chamber
8. Northern pyramid face air entrance located at 55% of the vertical height of the pyramid and connecting to the suction and concentration chamber
9. Air pipe
10. Over pressure relief valve to relieve over pressure from the subsidiary water dissociation reservoir and the water activated battery chamber
11. Over pressure connecting pipe
12. Water pipe between the main water reservoir chamber and the northern entrance to the water dissociation and gas separation tower
13. One way valve - upward
14. Water pipe between the main water reservoir chamber and the main water entrance
15. Valve
16. Concentrated water connecting pipe
17. Ultra pure water outlet
18. Air and oxygen gas outlet
19. Electricity outlet
20. Hydrogen gas outlet
21. Fuel cell
22. Three way valve
23. Hydrogen gas connecting pipe

24. Air and oxygen gas connecting pipe
25. Hydrogen and oxygen gases separator membrane
26. Fifty water dissociation cells (25 cells on each side)
27. The back part of the water activated battery in the subsidiary water dissociation reservoir
28. Hydrogen gas outlet from the water dissociation and gas separation tower
29. Material making the higher air prism identical to pyramid solidifying material (l) or other materials
30. Cylindrical lens made of red granite or other material
31. Water vapor trap and valves chamber
32. The beginning of the connecting wire made of gold or gold plated silver
33. Narrow air entrance to the suction and concentration chamber
34. Large air and oxygen outlet from the suction and concentration chamber
35. Ultra pure water connecting pipe
36. Oxygen gas outlet from the water dissociation and gas separation tower
37. One cell of dissociation for dissociation water
38. Wire made of gold or gold plated silver
39. Dissociation electrodes made of gold or gold plated silver in the water dissociation cell
40. Holder for hydrogen and oxygen gases separator membrane
41. Holder for water dissociation electrodes
42. Hydrogen gas storage chamber
43. Water dissociation and oxygen gas storage chamber
44. Water connecting pipe to the top of water dissociation and oxygen gas storage chamber
45. Water connecting pipe cover
46. Air space
47. Copper electrode for the water activated battery
48. Zinc electrode for the water activated battery
49. Connecting pipe between the water dissociation and gas separation tower and the subsidiary water dissociation reservoir and the water activated battery chamber
50. Main water entrance
51. Concentrated water outlet
52. Hydrogen gas connecting pipe to the Oxyhydrogen flame pyramidion chamber
53. Four way valve
54. Ultra pure water connecting pipe to the subsidiary water dissociation reservoir and the water activated battery chamber
55. Return pipe of ultra pure water from the Oxyhydrogen flame pyramidion chamber

5. Best Mode for Carrying Out the Invention

The best mode for carrying out the Pyramidal Machine invention is through many diversified ways like the accuracy of the unique pyramidal shape itself, the accuracy of setting the machine in accordance with the magnetic field of the earth (or by having its own magnetic field envelop), the internal components, its locations and its chemical composition.

Also, the chemical composition of the filling materials of the pyramidal shape to render it solid except for the specific internal spaces and chambers can increase its effeciency and overall productivity.

The usage of wind energy in the Giant Pyramidal Stations have an extra application amplification that makes its use so attractive in increasing the machine power many folds without using the conventional mechanical wind energy but through other ways that have not any moving parts of operation.

6. Industrial Applicability:

The Pyramidal Machine is a new technology that combines the magnetic fields with the shape and the chemical compositions of the materials to produce an effect resembling other sources of energy but without the pollution, noise or danger that others have.

For that while we are days from the 21 century and looking for other sources of producing energy safe and clean, the Pyramidal Machine can start suppling what we need from electricity to pure fresh water, from heating and cooling to method for the production of two very essential gases Hydrogen and Oxygen.

The Pyramidal Machine can be manufactured as small or Giant and the cost is good since the materials are available cheaply and because there is no moving parts make it a very long life apparatus or power and desalination plant.

THE CLAIMS

FIRST CLAIM

The pyramidal machine consists of a pyramid, a suction and concentration chamber, a water dissociation and gas separation tower, a subsidiary water dissociation reservoir and water activated battery chamber, a main water reservoir chamber, a top air chamber and Oxyhydrogen flame pyramidion chamber.

SECOND CLAIM

As noted in the first claim : the pyramid, that contains all the pieces of the machine, and the spaces and parts put in their specific locations and have specific features:

* Square base pyramid
* The sides will form an angle to the base of 52 degrees
* Vertical height ratio to the base length is 2 : 3.14
* Northern side of the base is perpendicular to the magnetic and geographic north pole
* The northern face is made up of three triangles to form a concave with the ratio of 0.004 to the base length
* The other three faces (western, eastern and southern) every one of them is made of two triangles to form a concave with the ratio of 0.004 to the base length
* The pyramid shape could be hollow or solid (by filling it with fresh or salt water or lime stone or other materials)

THIRD CLAIM

As noted in the first claim : a suction and concentration chamber located at third of the pyramid vertical height from the base and near the center of the pyramid on the horizontal plan, made of red granite or other materials and with an inlet and outlet for air with specific design that makes the suction pump.

Its roof is made up of 5 cylindrical lenses stacked on top of each other with an air space in between. The top most lens is separated from the one underneath it with the same pyramid filling material as mentioned above.

Above these 5 cylindrical lenses there is an enclosed space under the inverted V- shaped roof that is the higher air prism.

The placement of the connecting gold wire to the suction and concentration chamber and the placement of the suction and concentration chamber inside the pyramidal machine.

FORTH CLAIM

As noted in the first claim : a water dissociation and gas separation tower and what it contains of water dissociation cells, a golden connecting wire, a water connecting tube, a hydrogen and oxygen gases separator membrane, a tower height in relation to its length and width, its angled position, and its placement inside the pyramidal machine.

FIFTH CLAIM

As noted in the first claim : a subsidiary water dissociation reservoir and its water activated battery and what it contains from battery electrodes and its location and its back part with its connection, the four dissociating cells in the pipe connecting to the dissociation and gas separation tower, gold connecting wires, over pressure outlets, ultra pure water inlet, the angled ceiling of the chamber and the placement of the chamber inside the pyramidal machine.

SIXTH CLAIM

As noted in the first claim : a main water reservoir chamber and its specific location under the pyramidal machine, water entrance close to the chamber floor and water outlet about half the distance between the floor and the ceiling of the chamber.

SEVENTH CLAIM

As noted in the first claim : a top air chamber with its unique shape and its placement inside the pyramidal machine.

EIGHTH CLAIM

As noted in the first claim : an Oxyhydrogen flame pyramidion chamber with its complete pyramidal shape and its placement on lop of the pyramidal machine

Appendix 2 Meeting with a Remarkable Man

After filing the “Pyramidal Machine” in the Egyptian Patent Office in 1997, before filling worldwide, the Egyptian newspapers did many articles about the machine and its evidence on the Great Pyramid.

One day I received a call from a news reporter saying that Dr. Zahi Hawass the Director of the Pyramids would like to meet me to discuss the machine and the evidence. I was thrilled and happy to meet with such a remarkable knowledgeable man and agreed at once, at any time better for his busy schedule.

Within days I was sitting with Dr. Zahi Hawass in his office a few yards in front of the Great Pyramid.

Here is our one-hour meeting between Egyptology and Science:

Dr. Zahi: I do not like your theory that the Great Pyramid is a machine to produce energy from thousands of years ago.

Gamal: It is a theory supported with a working model that is an identical solid replica of this pyramid beside us.

Dr. Zahi: All people like my Great Pyramid and they mention many theories about it. You know, you can make a heater with charcoal in the shape of a pyramid and it will work just fine, you liked the pyramid shape but leave the Pharaohs to Egyptologists.

Gamal: This Great Pyramid building is science and not Egyptology, a machine to collect and amplify Life Energy that will benefit us and save us electricity and gas for a start.

Dr. Zahi: You see all these books behind me I read them all. You know what was my Doctorate in? It was in the Great Pyramid as a tomb to King Cheops.

Gamal: But there was no mummy there ever to call it a tomb.

Dr. Zahi: You mentioned to the newspaper that you went inside the Great Pyramid hundreds of times, how did you do that without a permit?

Gamal: I purchased an entry ticket every time I go there.

Dr. Zahi: Let's talk about the evidence that the Great Pyramid is a machine as you mentioned to the newspapers, you said that the northern face of the pyramid is three triangles.

Gamal: Yes and here is the only picture available worldwide, that I took during spring equinox to prove it.

Dr. Zahi looked at the picture and said: These triangles are made from the workers while dismantling the pyramid. You know it happened long time ago, in the year 1320 AD.

Gamal: Yes I know, after an earthquake in Cairo, Egypt. They had to dismantle the pyramid casing blocks to build with them other structures in Cairo.

Dr. Zahi: Exactly, that is why it has these three triangles like that.

Gamal: But the bottom stone under the dismantled cladding stones have this concave shape, as a matter of fact all the four faces of the Great Pyramid have concavity in their centerline.

Dr. Zahi: You mention about a suction pump in the King's Chamber, there is no pump there.

Gamal: The design of the entrance and exit of the air pipes inside the granite Energy Pump scientifically support that it is a Venturi suction pump design, since the northern air channel is a small square hole while the southern air pipe is a perfect large smooth bowl like hole. Both enter the granite Pump on a horizontal level in front of each other. The suction ability was proved with experiments.

Dr. Zahi: The southern outlet is a bowl like from the thieves breaking pieces of its granite. There is no pump there; you do not know the rituals of the Ancient Egyptians. I studied Egyptology for over 30 years. After the king dies and is buried in this pyramid, the soul of the king departs through these channels to go to the after life; you do not know anything about Egyptology to talk about it.

Gamal: Where else did the Ancient Egyptian implement this soul exit channels in all of Egypt?

Dr. Zahi: Nowhere else but the Great Pyramid.

Gamal: I rest my case.

Gamal: I want to ask you Dr. Zahi, fifteen years ago I went with my late brother Raouf on the eastern side plateau beside the Great Pyramid with a guide and he showed us a perfect cut well beside the three small pyramids, this well went down 90 feet (27 meters) and at the bottom, it has clear water running inside a channel towards the Great Pyramid from under the ground. I think this is the main water valve to fill the so-called Subterranean Chamber with water and start its mirror. Do you know about it?

Dr. Zahi: There is nothing like that here.

Gamal: I went in it my self and saw it with my own eyes, as a matter of fact we joked about it and said maybe we will bring our diving gear and dive in this water channel under the Great Pyramid to see were it goes.

Dr. Zahi: There is nothing like that here.

Dr. Zahi: You mention there is a copper pipe underneath the Great Pyramid; there are no copper pipes there.

Gamal: I never said copper pipe, and yes there is a connecting pipe under the pyramid. Here is a book that you are the author of with the Carnegie Museum of Natural History in Pennsylvania, and it shows this pipe underneath the Great Pyramid in the cross section.

Dr. Zahi: That is not a pipe, it is the well, is this what you meant?

Gamal: Yes, you call it the well and I call it the pipe. In the small machine, I used a pipe to connect all the system components together in a closed system.

Dr. Zahi: The well is dug in the core masonry underneath the Great Pyramid and the robbers and thieves dug this well.

Gamal: What do you think, did they dig this pipe from the top down or from the bottom up?

Dr. Zahi: From the bottom up.

Gamal: It is scientifically impossible for them to do that! Let me explain, with all the hardship in digging above their heads, but let’s say they did that…now at the ground level of the pyramid there is a room called the Grotto and...

Dr. Zahi: How did you know about the Grotto, it is forbidden for any one to go in the Grotto, how did you go there?

Gamal: I did not go in the Grotto, but here is another cross section and a plan of the Grotto from another book.

Dr. Zahi: Yes, I know there are books with the Grotto details.

Gamal: When we look at this cross section you will see a granite block in the middle of this limestone Grotto, as large as this desk, smooth from all six sides, with a hole running through it and estimated weight is seven tons, This granite block cannot fit in this pipe from the top or from the bottom to be in this Grotto.

Dr. Zahi: Well…

Gamal: Why does this granite block fit perfectly in an opening of the pipe wall at the Grotto level? It is an original design for a steam one way valve.

Dr. Zahi: A seven-ton valve?

Gamal: It is a seven-ton valve for a six million ton machine.

Gamal: I will tell you something else, from the so called Descending Passage bottom to the Grotto above, is all a dug shaft in the limestone bed rock, but from the Grotto up until it connects with the so called Grand Gallery, it is all built like a shaft with arranged stones all around it, like we build a shaft now with stones. How is that?

Dr. Zahi: The thieves built it so the well does not collapse on them.

Gamal: Another thing, the connection of the Grotto pipe with the top components is very well built, do you think the robbers built this?

Dr. Zahi: Yes.

Dr. Zahi: Do you know how to read Hieroglyphs, Gamal? I know how to read Hieroglyphs, how to write it and even how to speak it, do you know any of that?

Gamal: I know a few letters, but why should I learn Hieroglyphs when the Great Pyramid does not have one letter in Hieroglyphs.

This is: The difference between Science and Egyptology

About The Author

Gamal Elfouly is a researcher and scientist with a science degree from Cairo University.

His research started in the late 70's to find out the mystery of the Great Pyramid. After a long search in Egyptology and all the books and documents of the Great Pyramid and studying every stone and corner inside, outside and underneath the Great Pyramid, he was sure that it can't be a tomb or a temple for many logical reasons, and that it is built for another reason, to produce something abnormal and rare; something which must be very precious to be generated from such a precise giant machine from ancient times.

He found three basic scientific discoveries inside and underneath the Great Pyramid, which are the foundation of the machine function.

He applied for worldwide patents for his discoveries which are mentioned in his book "the Great Pyramid System: The Blue Light". Interviewed for many newspapers and magazines articles in addition to many TV and Radio shows about the Great Pyramid Machine in Egypt and USA.

He is awarded from the Arab Inventors conference in Egypt, December 1999

for displaying a working miniature model of the Great Pyramid Machine as a new scientific discovery.

It took him much effort, patience, time and money to proof with theory, evidence, discoveries and a miniature working model that the Great Pyramid is a working machine.

His book is available in full color or black & white. It is very enjoyable with over a hundred pictures, 25 diagrams and valuable information.

Refer to Chapter 3 “Life Energy” for more energy information
